Sponsored by Committee 9A 10 of the Council on Tall Buildings and Urban Habitat of the Structural Engineering Institute of ASCE This report uses an international perspective to look at structural safety problems from basic concept to design and construction The report examines the overall concept of safety including how to ensure safety and can assist engineers in explaining safety concepts to a client or the public Topics include safety concepts role of regulation and standards load modeling reliability analysis reliability based design durability in structural safety assessment soils and foundations assessment of existing structures quality management of structural design quality management in construction and human error Practicing structural engineers and students in the field of structural engineering will find this report useful *The Assessment of Structural Safety* Ezio Leporati,1979 *The Assessment of Structural Safety* Ezio Leporati, *Expert Systems in Structural Safety Assessment* Aleksandar S. Jovanovic,Karl F. Kussmaul,Alfredo C. Lucia,Piero P. Bonissone,2011-12-30 Structural safety of industrial systems and components raises a steadily growing public scientific and engineering interest and causes permanent development of methods and techniques used for its assessment In addition to the well established engineering methods applied in the field several new methods and tools have emerged recently Among them the most novel ones are probably those related to expert system applications appearing as an important possible improvement of the current engineering practice The issue has been addressed by the international course EXPERT SYSTEMS IN STRUCTURAL SAFETY ASSESSMENT organized by MPA Stuttgart and JRC Ispra Stuttgart October 2 4 1989 and the proceedings of the course are contained in this volume of the Lecture Notes in Engineering The contributions invited lectures tackle the issues usually confronting developers and users of expert systems applied in structural engineering i e in structural safety and integrity assessment Both the book and the course are a combination of a tutorial and of presentation of the current achievements in the field Starting from the basic elements of expert systems knowledge based systems the book should guide the reader up to the applications in various particular sub domains Structural Safety & Reliability Alfredo Hua-Sing Ang,Masanobu Shinozuka,Gerhart I. Schuëller,1990 Some 340 papers representing authors from thirty countries cover a wide range of developments in structural safety and reliability that concern all types of structures from space structures to land based facilities and ocean offshore systems Some of the topics included are wind engineering seismic design building performance redundancy fatig *Structures and Infrastructure Systems* Dan M. Frangopol,2019-12-18 Our knowledge to model design analyse maintain manage and predict the life cycle performance of infrastructure systems is continually growing However the complexity of these systems continues to increase and an integrated approach is necessary to understand the effect of technological environmental economic social and political interactions on the life cycle

performance of engineering infrastructure In order to accomplish this methods have to be developed to systematically analyse structure and infrastructure systems and models have to be formulated for evaluating and comparing the risks and benefits associated with various alternatives Civil engineers must maximize the life cycle benefits of these systems to serve the needs of our society by selecting the best balance of the safety economy resilience and sustainability requirements despite imperfect information and knowledge Within the context of this book the necessary concepts are introduced and illustrated with applications to civil and marine structures This book is intended for an audience of researchers and practitioners world wide with a background in civil and marine engineering as well as people working in infrastructure maintenance management cost and optimization analysis The chapters originally published as articles in *Structure and Infrastructure Engineering* **Maintenance, Monitoring, Safety, Risk and Resilience of Bridges and Bridge Networks** Tulio Nogueira Bittencourt, Dan Frangopol, Andre Beck, 2016-11-17 Maintenance Monitoring Safety Risk and Resilience of Bridges and Bridge Networks contains the lectures and papers presented at the Eighth International Conference on Bridge Maintenance Safety and Management IABMAS 2016 held in Foz do Igua u Paran Brazil 26 30 June 2016 This volume consists of a book of extended abstracts and a DVD containing the full papers of 369 contributions presented at IABMAS 2016 including the T Y Lin Lecture eight Keynote Lectures and 360 technical papers from 38 countries The contributions deal with the state of the art as well as emerging concepts and innovative applications related to all main aspects of bridge maintenance safety management resilience and sustainability Major topics covered include advanced materials ageing of bridges assessment and evaluation bridge codes bridge diagnostics bridge management systems composites damage identification design for durability deterioration modeling earthquake and accidental loadings emerging technologies fatigue field testing financial planning health monitoring high performance materials inspection life cycle performance and cost load models maintenance strategies non destructive testing optimization strategies prediction of future traffic demands rehabilitation reliability and risk management repair replacement residual service life resilience robustness safety and serviceability service life prediction strengthening structural integrity and sustainability This volume provides both an up to date overview of the field of bridge engineering as well as significant contributions to the process of making more rational decisions concerning bridge maintenance safety serviceability resilience sustainability monitoring risk based management and life cycle performance using traditional and emerging technologies for the purpose of enhancing the welfare of society It will serve as a valuable reference to all involved with bridge structure and infrastructure systems including students researchers and engineers from all areas of bridge engineering Safety, Reliability, Risk and Life-Cycle Performance of Structures and Infrastructures George Deodatis, Bruce R. Reliability assessment of concrete structures fib Fédération internationale du béton, 2018-08-01

Concrete structures have been built for more than 100 years At first reinforced concrete was used for buildings and bridges even for those with large spans Lack of methods for structural analysis led to conservative and reliable design Application of prestressed concrete started in the 40s and strongly developed in the 60s The spans of bridges and other structures like halls industrial structures stands etc grew significantly larger At that time the knowledge of material behaviour durability and overall structural performance was substantially less developed than it is today In many countries statically determined systems with a fragile behavior were designed for cast in situ as well as precast structures Lack of redundancy resulted in a low level of robustness in structural systems In addition the technical level of individual technologies e g grouting of prestressed cables was lower than it is today The number of concrete structures including prestressed ones is extremely high Over time and with increased loading the necessity of maintaining safety and performance parameters is impossible without careful maintenance smaller interventions strengthening and even larger reconstructions Although some claim that unsatisfactory structures should be replaced by new ones it is often impossible as authorities in general have only limited resources Most structures have to remain in service probably even longer than initially expected In order to keep the existing concrete structures in an acceptable condition the development of methods for monitoring inspection and assessment structural identification nonlinear analysis life cycle evaluation and safety and prediction of the future behaviour etc is necessary The scatter of individual input parameters must be considered as a whole This requires probabilistic approaches to individual partial problems and to the overall analysis The members of the fib Task Group 2.8 Safety and performance concepts wrote on the basis of the actual knowledge and experience a comprehensive document that provides crucial knowledge for existing structures which is also applicable to new structures This guide to good practice is divided into 10 basic chapters dealing with individual issues that are critical for activities associated with preferably existing concrete structures Bulletin 86 starts with the specification of the performance based requirements during the entire lifecycle The risk issues are described in chapter two An extensive part is devoted to structural reliability including practical engineering approaches and reliability assessment of existing structures Safety concepts for design consider the lifetime of structures and summarise safety formats from simple partial safety factors to develop approaches suitable for application in sophisticated probabilistic non linear analyses Testing for design and the determination of design values from the tests is an extremely

important issue This is especially true for the evaluation of existing structures Inspection and monitoring of existing structures are essential for maintenance for the prediction of remaining service life and for the planning of interventions Chapter nine presents probabilistically based models for material degradation processes Finally case studies are presented in chapter ten The results of the concrete structures monitoring as well as their application for assessment and prediction of their future behaviour are shown The risk analysis of highway bridges was based on extensive monitoring and numerical evaluation programs Case studies perfectly illustrate the application of the methods presented in the Bulletin The information provided in this guide is very useful for practitioners and scientists It provides the reader with general procedures from the specification of requirements monitoring assessment to the prediction of the structures lifecycles However one must have a sufficiently large amount of experimental and other data e g construction experience in order to use these methods correctly This data finally allows for a statistical evaluation As it is shown in case studies extensive monitoring programs are necessary The publication of this guide and other documents developed within the fib will hopefully help convince the authorities responsible for safe and fluent traffic on bridges and other structures that the costs spent in monitoring are first rather small and second they will repay in the form of a serious assessment providing necessary information for decision about maintenance and future of important structures

Safety of historical stone arch bridges Dirk Proske, Pieter van Gelder, 2009-09-18 Historical stone arch bridges are still a major part of the infrastructure in many countries Although this type of bridge has proven to be an efficient construction type it often poses the problem of insufficient numerical models of the load bearing behavior Therefore the book introduces methods to adapt life loads and introduces different types of numerical models of the load resistance respectively The book continues with the introduction of specific damages and strengthening techniques The book particularly focuses on the probabilistic safety assessment of historical arch bridges for which often only limited material and structural data is available
