The Vestibular System in Cognitive and Memory Processes in Mammals Stéphane Besnard,Christophe Lopez,Thomas Brandt,Pierre Denise,Paul F. Smith,2016-02-12 Since the beginning of life all plant and animal kingdoms have been developed or modified based on gravity along with atmospheric composition and solar radiation existing on Earth Gravity is mainly encoded by the otolithic sensors of the vestibular system but its role has been largely underestimated in favor of the vestibular semicircular canals and reduced to oculomotor and postural coordination Over the last decade it has been demonstrated that sensory information provided by the vestibular system is crucial in spatial memory processes in rats and humans More recently a role in attention processes has been raised This topic aims to report and demonstrate the role and integration of vestibular information in cognitive processes in rodent models and human at the behavioral imaging and electrophysiological levels

Tracing the Emergence of Psychology, 1520-1750 Sven Hroar Klempe,2020-08-25 This book pursues the very first use of the term psychology which is traced back to 1520 The appearance of the term was not as a part of philosophy Thus the main hypothesis of this book is that psychology from the very beginning was a stranger to philosophy It demonstrates that even Aristotle used his thesis on the soul to delineate philosophy from psychological aspects It is therefore suggested that psychological wisdom and knowledge has been retained and in popular culture as long as humans have reflected upon themselves There were however several reasons for why psychology appeared as a part of philosophy at around the year 1600 One important factor was Humanism which among other things had challenged Aristotelian logic Another important

movement was Protestantism Luther's emphasis on the need to confess one's sin led to a certain interest to explore the human nature His slogan the scripture alone represented an attack on the close relationship that had existed between theology and philosophy Yet when philosophy was thrown out of theology it was left without the basic theological tenets that had guided philosophical speculations for centuries in Europe Hence this book pursues how philosophy gradually adopts and includes psychological aspects to rebuild the foundation for philosophy This culminates partly with the British empiricists Yet they did not apply the term psychology It was the German and partly ignored philosopher Christian Wolff who opened up modern understanding of psychology with the publication of *Psychologia empirica* in 1732 This publication had a tremendous impact on the enlightenment in the modern Europe
