serious economic and maintenance aspects between them the tendency to reach the minimal production cost the maximal system operation reliability are the most frequent Suppose that we are dealing with an system S consisting of N components represented by the system parameters $x_i, i = 1, 2, \dots, N$ which are arranged in certain structure so that the K system functions $F_k, k = 1, 2, \dots, K$ expressing the considered system properties fulfill the condition $F \in F_0 \subseteq A \subseteq F_1$ Here $F \in F_k$ is the set of the actual system functions $F_0 \in F_0$ is the set of the nominal system functions and $A \in F_1$ is the set of the allowable system function deviations The set F depends besides the system structure also on the vector $X = (x_1, x_2, \dots, x_N)$ of the system parameters Suppose that the system structure is invariant
