Bellack, Michel Hersen, Alan E. Kazdin, 2012-12-06 It is particularly gratifying to prepare a second edition of a book because there is the necessary implication that the first edition was well received Moreover now an opportunity is provided to correct the problems or limitations that existed in the first edition as well as to address recent developments in the field Thus we are grateful to our friends colleagues and students as well as to the reviewers who have expressed their approval of the first edition and who have given us valuable input on how the revision could best be structured Perhaps the first thing that the reader will notice about the second edition is that it is more extensive than the first The volume currently has 41 chapters in contrast to the 31 chapters that comprised the earlier version Chapters 3 9 29 and 30 of the first edition either have been dropped or were combined whereas 14 new chapters have been added In effect we are gratified in being able to reflect the continued growth of behavior therapy in the 1980s Behavior therapists have addressed an ever increasing number of disorders and behavioral dysfunctions in an increasing range of populations The most notable advances are taking place in such areas as cognitive approaches geriatrics and behavioral medicine and also in the treatment of childhood disorders

Psychological and Behavioral Assessment Phyllis R. Magrab, 2012-12-06 Over the last several decades the remarkable success of science and medical technology has allowed many children with chronic illness and handicapping conditions to live longer and healthier lives But this success is not without toll The human cost of chronic illness or a handicapping condition can be enormous for the child and the family For the family there is often the stressful daily burden of care fatigue marital stress low family morale financial burdens and reduced career mobility For the child there are often arduous and painful treatment regimes frequent school absences low energy periods and uncertainties with respect to future education and vocation The course of many diseases is unpredictable and the very fact of chronicity implies ongoing coping problems for the family and the child The impact of a chronic illness or handicapping condition on a family system is usually more disintegrative than integrative disrupting the lives of all family members and exacerbating the developmental risks to the child It is not surprising that a recent comprehensive study for establishing public policies for children with chronic illness at

Vanderbilt University has called attention to these factors and produced as a primary recommendation increased attention to the psychological impact of disease on the family and the child. In this context there is an important need for adequate assessment of psychological and behavioral problems in these children to plan for appropriate services.
