Stephen Lowell Cardwell,1972-01-01

Western Technology and China's Industrial Development Hsien-ch'un

Wang,2022-04-22 This book explores how steam engine technology was transferred into nineteenth century China in the

second half of the nineteenth century by focusing on the transmission of knowledge and skills It takes on the long term

problem in historiography that puts too much emphasis on politics but ignores the techno scientific and institutional

requirements for launching such an endeavor It examines how translations broke linguistic and conceptual barriers and

brought new a understanding of heat to the Chinese readership It also explores how the Fuzhou Navy Yard s shipbuilding

and training program trained China s first generation of shipbuilding workers and engineers It argues that conservatism

against technology was not to blame for China s slow development in steamship building Rather it was government officials

failure to realize the scale of institutional and techno scientific changes required in importing and disperse new knowledge

and skills *Technik: Eine Geschichte Ihrer Probleme. A History of Western Technology ... Translated by Dorothea Waley*

**Technology** Bruce Cosby, 2005      **Transforming History** Brian Moloughney, Peter Zarrow, 2012-02-03 Transforming History examines the profound transformation of historical thought and practice of writing history from the late Qing through the midtwentieth century. The authors devote extensive analysis to the common set of intellectual and political forces that shaped the study of history from the ideas of evolution, positivism, nationalism, historicism, and Marxism to political processes such as revolution, imperialism, and modernization. Also discussed are the impact and problems associated with the nation-state as the subject of history, the linear model of historical time, and the spatial system of nation-states. The result is a convincing study that illustrates how history has transformed into a modern academic discipline in China. *Science and Technology in World History, Volume 3* David Deming, 2014-01-10 This installment in a series on science and technology in world history begins in the fourteenth century, explaining the origin and nature of scientific methodology and the relation of science to religion, philosophy, military history, economics, and technology. Specific topics covered include the Black Death, the Little Ice Age, the invention of the printing press, Martin Luther and the Reformation, the birth of modern medicine, the Copernican Revolution, Galileo, Kepler, Isaac Newton, and the Scientific Revolution. **The Development of Western Technology Since 1500** Thomas Parke Hughes, 1966      *A History of Western Society, Value Edition, Volume 1* Merry E. Wiesner-Hanks, Clare Haru Crowston, Joe Perry, John P. McKay, 2022-12-06 A lively journey through the story of Western civilization focusing on societies, cultures, and the lives of both ordinary and extraordinary men and women. *Technology and the Raj* Roy MacLeod, 1995-11-03 The relationship between technology and colonialism in British India is the focus of this book. Three important areas are examined: the practices shaping and constraining technology transfer and the growth of education in the fields of technology and engineering; the emerging patterns in transportation and communication; and the struggle for technological sovereignty before India achieved political independence in 1947. Presenting new research in these areas, the book relates the history of technology in India to issues of economic relations and culture. *Catalogue* Harvard University. Graduate School of Design. Library, 1974      *A Culture of Improvement* Robert Friedel, 2010-02-26 How technological change in the West has been driven by the pursuit of improvement: a history of technology from plows and printing presses to penicillin, the atomic bomb, and the computer. Why does technology change over time? how does it change, and what difference does it make? In this sweeping, ambitious look at a thousand years of Western experience, Robert Friedel argues that technological change comes largely through the pursuit of improvement: the deep-rooted belief that things could be done in a better way. What Friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life, from tilling fields and raising children to waging war. Improvements can be ephemeral or lasting, and one person's improvement may not always be viewed as such by others. Friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not. These processes, he emphasizes, have created both winners and losers in history. Friedel presents a series of narratives of Western technology that begin in the

eleventh century and stretch into the twenty first Familiar figures from the history of invention are joined by others the Italian preacher who described the first eyeglasses the dairywomen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to Gustav Eiffel Friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle Friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide The most comprehensive attempt to tell the story of Western technology in many years engagingly written and lavishly illustrated A Culture of Improvement documents the ways in which the drive for improvement has shaped our modern world
