Gardner,2017-10-22 Excerpt from A Journey to the Earth s Interior or Have the Poles Really Been Discovered The Copernican system of astronomy was a step in advance of the Ptolemaic system just because it enabled

scientists to discover many new facts about the solar system which the error of the old view had hidden from their gaze My own theory adds to the valuable results gained by the Copernican System not by subverting it for I imagine that no sane person would now try to do that but by accepting it fully and adding to it a different theory of the evolution of the several planets from their nebulae and from this new theory of evolution deducing certain presumptions about the interior of the earth These presumptions I have supported by a wealth of facts discovered by the telescopic observations of astronomers of nebulae and one of our sister planets Mars and made by explorers of the most fascinating parts of our own planet the polar regions About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Contesting Earth's History in Transatlantic Literary Culture, 1860-1935 Richard Fallon, 2025-02-14

By the mid nineteenth century geologists and palaeontologists had reconstructed an authoritative narrative of Earth's deep history from the planet's molten origins to the rise of humanity Many figures in transatlantic science across subsequent decades however had problems with this narrative it was too secular inhuman and evolutionary or controlled too exclusively by elite scientists Speaking from palaeoscience's unevenly professionalized and controversy racked borders Christian fundamentalists charismatic psychics and respected scholars alike voiced their objections Until now no study has brought their work together for detailed comparative analysis Spanning from the 1860s to the interwar decades *Contesting Earth's History* examines the fascinating stories of five significant examples of fringe or borderline palaeoscience old and young earth creationism hollow earth theory clairvoyant time travel and sunken continent catastrophism Innovatively combining methods from literary studies with the history of science this book attends not just to the conceptual content of these strange sciences but also to their proponents communication of truth claims through diverse genres ranging from the scientific textbook and the technical monograph to the lost world romance and the epic poem By paying close attention to the hitherto overlooked textual forms and literary strategies of these works of pseudoscience this volume throws into relief the variant conceptions of audience evidence and method that jostled and competed in wider scientific culture during this period It also demonstrates that for all their diversity authors of borderline palaeoscience shared the desire to shift the balance of power creating textual spaces where exclusive hierarchies of scientific expertise could be levelled away These conjurers of lost worlds often captivated wide audiences and many of their bizarre astonishing and iconoclastic ideas remain with us to this day Some even inspired early science fiction by the likes of H P Lovecraft and Edgar Rice Burroughs Hijacking geologists and palaeontologists longstanding effort at making the prehistoric past visible authors on the borderlines of palaeoscience

Purchasers can usually download a free scanned copy of the original book without typos from the publisher. Not indexed. Not illustrated. 1920 edition. Excerpt: And to regard them as carried by some glacial movement from the northern orifice would seem a much simpler explanation. It is interesting to note that this whole valley by the way was free from snow and covered with luxuriant vegetation. And as was indeed the case generally in these explorations there was an abundance of animal life observed. BUTTERFLIES AND BEES. A little later Greely passed to the other side of this valley and found that he had reached the watershed of this part of Grinnell Land the other side of the ridge draining into Lake Hazen. Here he did actually see a glacier on the north side of that lake which ought to have given him a hint about the two trees he had so recently discovered. He also caught at that point a butterfly and saw three shuas, two bumble bees and many flies. A little later a member of his party saw two terns and a long-tailed duck. What was even more remarkable they next came across a flock of twelve to fifteen birds which resembled snipe but were unlike any actual species of that bird he had ever seen or read of. Other ducks were also seen and nine musk oxen. Incidentally a few nights the party were unable to obtain much sleep owing to the large number of flies which bothered them incessantly. The temperature was as high as 50 degrees Fahrenheit and never went below 47 degrees and there was always enough dead willow around for fuel. As the days went on more muskoxen were seen a great variety of birds and quite a little reindeer moss although it was considered that it never grew as far north as Discovery Harbor. Near Lake Hazen a deserted Eskimo encampment was found its surroundings marked by luxuriant vegetation of grass, sorrel, poppies and other plants. Some specimens of the sorrel

JOURNEY TO THE EARTH'S INTERIOR, OR HAVE THE POLES REALLY BEEN DISCOVERED. MARSHALL B. GARDNER, 2018 *A Journey to the Earth's Interior* Marshall B. Gardner, 2007 *A Journey to the Earth's Interior* Marshall Gardner, 2025-09-13 The earth is not solid it is hollow and within it exists another world. Marshall B. Gardner includes the original illustrations. First published in 1913 and expanded in 1920. *A Journey to the Earth's Interior* is Marshall B. Gardner's remarkable contribution to the literature of speculative science and hollow earth theory. Arguing against conventional geology and astronomy, Gardner presents the bold claim that the Earth is hollow with vast interior lands and even a hidden sun at its center. Drawing upon polar exploration, unusual geographic phenomena, and reports of mysterious warm currents and migrating wildlife, Gardner contends that the hollow earth is accessible through openings at the poles. Blending imaginative speculation with references to contemporary science, his work remains one of the classic texts of alternative scientific thought in the early twentieth century. Though rejected by mainstream science, *A Journey to the Earth's Interior* continues to fascinate readers as a historical curiosity, a cornerstone of hollow earth literature, and an early example of alternative cosmology. For students of pseudoscience, speculative history, and the cultural history of exploration, Gardner's

book offers a vivid glimpse into the power of human imagination to challenge accepted knowledge **A Journey to the Earth's Interior, Or Have the Poles Really Been Discovered, - Illinois, 1913** Marshall B. Gardner, 1913
