Beyond Modularity :

Beyond Modularity Annette Karmiloff-Smith, 1995-09-25 Taking a stand midway between Piaget's constructivism and Fodor's nativism Annette Karmiloff-Smith offers an exciting new theory of developmental change that embraces both approaches She shows how each can enrich the other and how both are necessary to a fundamental theory of human cognition Karmiloff-Smith shifts the focus from what cognitive science can offer the study of development to what a developmental perspective can offer cognitive science In *Beyond Modularity* she treats cognitive development as a serious theoretical tool presenting a coherent portrait of the flexibility and creativity of the human mind as it develops from infancy to middle childhood Language physics mathematics commonsense psychology drawing and writing are explored in terms of the relationship between the innate capacities of the human mind and subsequent representational change which allows for such flexibility and creativity Karmiloff-Smith also takes up the issue of the extent to which development involves domain specific versus domain general processes She concludes with discussions of nativism and domain specificity in relation to Piagetian theory and connectionism and shows how a developmental perspective can pinpoint what is missing from connectionist models of the mind

The Modularity of Emotions Luc Faucher, Christine Tappolet, 2008 Quick and smart Karen Jones Against emotional modularity Ronald de Sousa Emotions are not modules James A Russell Beyond the basics Robyn Bluhm Empathy primitive reactions and the modularity of emotion Anne J Jacobson Biological modules and emotions Paul Dumouchel Is emotion a form of perception Jesse J Prinz Two views of emotional perception Andrew Sneddon Assembling the emotions Vincent Bergeron and Mohan Matthen Cognitive modularity of emotion Louis C Charland Shame and other cases of modularity without modules Ruwen Ogien Unexpected pleasure Timothy Schroeder **Beyond Wittgenstein's Poker** Peter Munz, 2004 Munz argues that the later Wittgenstein and Popper ought to be seen as complementing one another Popper believed that when truth is discovered meaning will take care of itself However since in Popper's view we can never verify a general proposition we can never be certain of its truth There must therefore be a way of understanding what it means even though we cannot be

sure of its truth The post Tractatus Wittgenstein enables us to see how propositions are meaningful regardless of whether we can ascertain their truth and thus fills a gap in Popper s philosophy At the same time Popper was able to make up a deficiency in Wittgenstein s later philosophy While Wittgenstein had had it that meaningful propositions can be generated in any social order Popper showed that if propositions are to be true as well as have meaning the socio political order in which they are put forward has to be free and open

The Nature of Intelligence Novartis Foundation,2000 Evolutionary psychology and behavioural genetics are two successful and important fields in the study of human behaviour but practitioners in these subjects have different conceptions of the nature of human intelligence Evolutionary psychologists dispute the existence of general intelligence and emphasise the differences among species They argue that natural and sexual selection would be expected to produce intelligences that are specialised for particular domains as encountered by particular species Behavioural geneticists consider general intelligence to be the most fundamental aspect of intelligence and concentrate on the differences between individuals of the same species This exciting book features papers and discussion contributions from leading behavioural geneticists evolutionary psychologists and experts on intelligence that explore the differences and the tensions between these two approaches The nature of g or general intelligence is discussed in detail as is the issue of the heritability of intelligence The alternative approaches that emphasise domain specific intelligences are explored alongside wide ranging discussions on a broad range of issues such as the biological basis for intelligence animal models and changes in IQ scores over time
