Carcinogenic and Anticarcinogenic Food Components Wanda Baer-Dubowska, Agnieszka Bartoszek, Danuta Malejka-Giganti, 2005-09-22 As the interest in anticarcinogenic food components increases Carcinogenic and Anticarcinogenic Food Components provides information on cancer promoting and cancer preventing food components indicating their contents in foods biological activities possible impact on human cancer risk and practical implications for dietary recommendations and functional design This volume concentrates on the effects of diet on human health rather than on the nutritive aspects of diet and presents the multidisciplinary character of investigations on chemopreventive as well as carcinogenic properties of food components

Carcinogenic and Anticarcinogenic Food Components Wanda Baer-Dubowska, Agnieszka Bartoszek, Danuta Malejka-Giganti, 2005-09-22 Dietary cancer prophylaxis is based on the detailed knowledge of carcinogenic and anticarcinogenic properties of food constituents Although much data has been collected on these elements an understanding of the causal mechanisms that link diet and cancer is still evolving Carcinogenic and Anticarcinogenic Food Components explains the broad spect

Potentially Anticarcinogenic Components from Cranberry Fruit Lei Liu, 2002 Mutagens and Carcinogens in the Diet Michael W. Pariza, James S. Felton, Hans-Ulrich Aeschbacher, Shigeaki Sato, 1990-07-09 This comprehensive work explores a unique and often overlooked aspect of human cancer development and nutrition namely naturally occurring carcinogens in foods focusing specifically on those associated with cooking or thermal processing This book covers carcinogenicity of mutagens from cooked meats dietary factors affecting spontaneous chromosomal damage in man genotoxic mechanisms of fecapentaene 12 in human cells antimutagenic anticarcinogenic food components updated legislative and regulatory perspectives from Japan Europe and the U S and more

Anticancer Research, 2008 **Carcinogens and Anticarcinogens in the Human Diet** National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Comparative Toxicity of Naturally Occurring Carcinogens, 1996-02-12 Despite increasing knowledge of human nutrition the dietary contribution to cancer remains a troubling question Carcinogens and Anticarcinogens assembles the best available information on the magnitude of potential cancer risk and potential anticarcinogenic effect from naturally occurring chemicals compared with risk from synthetic chemical constituents The committee draws important conclusions about diet and cancer including the carcinogenic role of excess calories and fat the anticarcinogenic benefit of fiber and other substances and the impact of food additive regulation The book offers recommendations for epidemiological and diet research Carcinogens and Anticarcinogens provides a readable overview of issues and addresses critical questions Does diet contribute to an appreciable proportion of human cancer Are there significant interactions between carcinogens and anticarcinogens in the diet The volume discusses the mechanisms of carcinogenic and anticarcinogenic properties and considers whether techniques used to evaluate the carcinogenic potential of synthetics can be used with naturally occurring chemicals The committee provides criteria for
