**Ignorant Confidence: The Dunning-Kruger Effect in the Modern Classroom** Michael Smith, 2026-03-28 It is the most frustrating scenario for any educator a student bombs a crucial exam and is genuinely absolutely shocked by the failing grade having been completely certain they were going to score an A This is not arrogance or laziness it is a severe psychological deficit known as the Dunning Kruger Effect In the classroom this cognitive bias proves that the students who lack the knowledge to master a subject also fundamentally lack the metacognitive ability to recognize how badly they are failing Because they do not know what they do not know their brain artificially inflates their confidence They stubbornly stick to terrible study habits reading notes instead of testing themselves completely blind to their own academic doom This book breaks down the neurological barrier of self assessment We explore tactical interventions for adults and students to actively destroy their own false confidence by forcing objective brutal self testing before the actual exam Break the cycle of confident failure Discover why the hardest part of learning is realizing exactly how much you do not understand
