Beyond Patient Pathways Davina Allen, 2026-01-23 How is care coordinated when the course is uncertain the work distributed and the patient constantly redefined In this detailed ethnographic study of the hip fracture trajectory **Beyond Patient Pathways** challenges the dominant rational linear logic of care pathways to reveal the complex evolving assemblages that underpin everyday service delivery The book traces how coordination is accomplished within and across diverse settings from the control centre and ambulance services through the emergency department hospital ward and operating theatres to community based care The first ever study to examine the organisation of end to end processes in real time it offers unique insights into the changing shape of patient trajectories Anchored in classic sociological ideas on patient trajectories and informed by Translation Mobilisation Theory **Beyond Patient Pathways** reframes patient centred care not as a fixed ideal but as something enacted through shifting concerns technologies and institutional arrangements It brings to light the diversity of ways in which care is organised including the often invisible work that sustains coordination across time and settings In doing so it offers not only a powerful conceptual lens but also a methodological foundation for studying care trajectories in ways that are sensitive to the relational intricacies and dynamic configurations of care work The complexity of care systems is increasingly acknowledged but they are difficult to study systematically This book provides both the empirical grounding and the theoretical tools needed to do so making it an essential resource for a wide readership of researchers medical sociologists service managers improvement scientists and healthcare professionals with an interest in health services management quality improvement person centred care care planning and interprofessional education

Clinical Paths Patrice Spath, 1994-08-29 Health care providers must continually search for new ways to improve the quality of patient

care services To monitor quality of care it is crucial for health care managers to concentrate on outcomes management Clinical Paths offering a comprehensive perspective on outcomes management contains numerous enlightening case studies as well as unprecedented information on how clinical path based patient care is being used to manage patient outcomes in different organizational settings *EHealth Beyond the Horizon* European Federation for Medical Informatics. International Congress, Stig Kjær Andersen, 2008 The first part of the MIE 2008 conference theme eHealth Beyond the Horizon highlights the expectations for the future of ehealth and raises the question What sort of developments in ehealth services can we imagine emerging above the horizon in the years to come EHealth Beyond the Horizon contains a good number of high quality papers giving different perspectives of this future some of them already available today in pilot scale some of them outlined in visions The second part of the theme Get IT There has triggered a large number of papers describing how to create evaluate adjust and deliver products and deploy services in healthcare organizations for the necessary information technology as a basis for the ehealth applications that are essential in order to respond to the challenges of the health systems The papers in the proceedings are grouped by themes according to the submission categories and the supplied keywords As the last theme three doctoral students from different areas of medical informatics were selected to present and discuss their research under the guidance of a panel of distinguished research faculties Careers Beyond Clinical Medicine Heidi Moawad, 2013-02-01 Career changes are becoming common among professionals in recent years Many physicians may want to change direction but often do not know whether it is the right thing to do or if pursuing a career outside of clinical practice would achieve their professional goals Doctors have the training and education to contribute to society in many beneficial ways in addition to traditional clinical practice Yet there is no formal mapped out route for doctors who want to pursue alternative careers which is where *Careers Beyond Clinical Medicine* comes in Doctors at any stage from early in training to mid career to nearing retirement can use *Careers Beyond Clinical Medicine* to clearly evaluate the issues involved when considering a career change This book shows physicians how they can serve society and patients in innovative ways and make a notable impact on health care delivery policy and quality when they use their medical background in a non traditional career pursuit The numerous unadvertised opportunities for physicians are explored and a step by step route with practical advice for finding the best career is described Recent advances in healthcare technology medical science patient education require physicians to play new roles that have not traditionally been well defined Doctors can innovate and have a long term productive impact on healthcare in the United States and throughout the world if they learn to seize the non traditional career opportunities available to physicians or even create a new way to fill a void in health care *Careers Beyond Clinical Medicine* helps illuminate that path **The Uncharted Path from Clinic-based to Community-based Research** Bonita Stanton, Jennifer Galbraith, Linda Kaljee, 2008 Community based health related research requires a reciprocal relationship between researchers and communities that differs from the relationships established in clinic based health

related research In the former not only is there a direct relationship with the individual as there is in clinic based research but an equally important and constantly changing relationship with the community Also in community based research relationships change from that in which individuals are subjects of research to the same individuals as participants or partners in the research process These academic community relationships are especially complex because frequently the community does not speak with a single voice and may have multiple different constituencies and perspectives In addition research teams comprised of several disciplines may be perceived as coming from unique academic communities which of themselves may have different ways of envisioning community based research There is a recent call for more transdisciplinary research and yet there are limited empirical studies available which critically examine how disciplines work separately and in tangent to affect community based research This book will be used both by researchers and by those teaching upper graduate level and graduate level health education
