Beyond Mechanization Work Technology In A Postindustrial Age:

Beyond Mechanization Larry Hirschhorn, 1986-02-07 Human skill and judgment are needed now more than ever to effectively run today's complex computerized production systems. In this thought-provoking study of work, worker, and machine in the postindustrial age, Hirschhorn points out that factories will become places of learning where the worker must be able to diagnose and solve an array of problems generated by error-prone machine systems. With numerous examples, he shows that the new technology can fail in unexpected ways and that human judgment has become increasingly important. The new technology also blurs the line between managing and working, requiring workers, craftsmen, machine operators, or engineers to become generalists who will have to deal with unstructured and open-ended problems. Hirschhorn links theory to the shop floor, examining such issues as the role of unions and the economics of the job shop and describes a new type of factory setting where supervisors are teachers and workers are organized into teams paid according to how much they have learned. *Future Survey Annual 1985* Michael Marien, 1987-01-01

Labour Law in an Era of Globalization Joanne Conaghan, Richard Michael Fischl, Karl Klare, 2004 Throughout the industrial world, the discipline of labor law has fallen into deep philosophical and policy crisis at the same time as new theoretical approaches make it a field of considerable intellectual ferment. Modern labor law evolved in a symbiotic relationship with a postwar institutional and policy agenda, the social, economic, and political underpinnings of which have gradually eroded in the context of accelerating international economic integration and wage competition. These essays, which are the product of a transnational comparative dialog among academics and practitioners in labor law and related legal fields including social security, immigration, trade, and development, identify, analyze, and respond to some of the conceptual and policy challenges posed by globalization. The Challenge of New Technology to Labor-management Relations David C. Mowery, Bruce E. Henderson, 1991

Information Technology and Organizational Transformation JoAnne Yates, John Van Maanen, 2001 Assesses information technology and organizational transformation. Moves beyond the superficial glorification of information technology as an instrument of social change, examining mechanisms of change as they play out in everyday organizational life. Chapters are in sections on the history, rhetoric, and future of advanced societies. **Transcending Capitalism** Howard Brick, 2006-11-30 Understanding why a generation of social theorists imagined the future of advanced societies would not be defined by capitalism but rather as being postcapitalist or postindustrial. **Information Technology in Post-industrial Organizations** Wanda Janina Orlikowski, 1991 *The Quarterly Newsletter of the Laboratory of Comparative Human Cognition* University of California, San Diego. Technology and Employment Richard Michael Cyert, David C. Mowery, Committee on Science, Engineering, and Public Policy (U.S.). Panel on Technology and Employment, 1987 This report addresses a number of issues that have surfaced in the

debates over the impact of technological change on employment These issues include the effects of technological change on levels of employment and unemployment within the economy on the displacement of workers in specific industries or sectors of the economy on skill requirements on the welfare of women minorities and labor force entrants in a technologically transformed economy and on the organization of the firm and the workplace It concludes that technological change will contribute significantly to growth in employment opportunities and wages although workers in specific occupations and industries may have to move among jobs and careers Recommends initiatives and options to assist workers in making such transitions ISBN 0 309 03744 1 pbk **Industrial and Labor Relations Review** ,1986 *Labor Studies Journal* ,1986 Industrial Relations ,1999 New Technology at the Outset Meinolf Dierkes,Ute Hoffmann,1992 **Postwar American Critical Thought** Peter Beilharz,2006 **Computer Briefing** Lynn M.
