Research Gregory J. Feist,Roni Reiter-Palmon,James C. Kaufman,2017-01-31 As individual subjects creativity and personality have been the focus of much research and many publications This Cambridge Handbook is the first to bring together these two topics and explores how personality and behavior affects creativity Contributors from around the globe present cutting edge research about how personality traits and motives make creative behavior more likely Many aspects of personality and behavior are examined in the chapters including genius emotions psychopathology entrepreneurship and multiculturalism to analyse the impact of these on creativity The Cambridge Handbook of Creativity and Personality Research will be the definitive resource for researchers students and academics who study psychology personality and creativity

The Relationship Between Personality and Creativity Talana Naude,2013 The aim of the current study is threefold to develop a creativity questionnaire based on the main criteria for creativity as determined by means of a comprehensive literature survey to administer this questionnaire in combination with the Abbreviated Torrance Test for Adults ATTA and the 16PF for the purpose of determining respondents level of creativity in relation to their personality constellation to determine whether a typical 16PF profile can be obtained for the purpose of identifying a creative individual The sample consisted of fourth year Psychology students at the University of Pretoria Identified problems that motivated the research include amongst others a lack of research in this domain and therefore a need for a reliable and valid measuring instrument for creativity Creative individuals are often misinterpreted or misunderstood by the community as the result of a lack of knowledge The purpose of the research will also be to reduce misconceptions such as these by informing the reader about creativity as well as the individuals who possess this unique characteristic Creativity is however an extremely broad concept which is very difficult to define and only the main criteria for creativity were applied in the development of the Creativity Questionnaire According to Ryhammar Brolin 1999 creative individuals can be described as being motivated persevering intellectually inquisitive having a need for self actualisation independent in thought and deed confident self aware and open to external and internal stimulation Operationalisation of such criteria formed the basis of the Creativity Questionnaire The dissertation reports on the development of a Creativity Questionnaire which can be used in a variety of areas but will need further revision and refinement in terms of items included validity and reliability Therefore the current study should be considered as a pilot study for the testing and development of this questionnaire The results of this investigation confirm and extend previous research in demonstrating a close association between creativity and specific personality traits Creative subjects as measured by the ATTA indicated that they perceive themselves to be significantly more independent in thought open to experience dominant individualistic and competent than less creative subjects Both subjects with average and high creativity levels indicated that they tend to be more resourceful self sufficient and prefer to make their own decisions These subjects

tend to be more abstract thinking and bright Both subjects with low creativity levels and subjects with high creativity levels indicated that they tend to be more spontaneous socially bold uninhibited and venturesome than subjects with average creativity levels The latter subjects tend to be more restrained sensitive to threats timid and shy Subjects with low creativity levels on the other hand indicated that they tend to be more outgoing participating warm hearted and easy going than subjects with an average creativity level The latter subject group tends to be more critical detached and reserved Subjects with low creativity levels also seem to be joiners sound followers and group dependent These subjects also indicated that they tend to be more concrete thinking and less intelligent than subjects with average and high creativity levels **The Oxford Handbook of Group Creativity and Innovation** Paul B. Paulus, Bernard A. Nijstad, 2019-04-30 Although creativity is often considered an individual ability or activity innovation in teams and organizations involves collaboration of people with diverse perspectives knowledge and skills The effective development of collaborative innovations and solutions to problems is critical to the success of teams and organizations but research has also demonstrated many factors which tend to limit the effectiveness of collaborative innovation of groups and teams This volume highlights recent theoretical empirical and practical developments that provide a solid basis for the practice of collaborative innovation and future research It draws from a broad range of research perspectives including cognition social influence groups teams creativity communication networks information systems organizational psychology engineering computer science and the arts This volume is an important source of information for students scholars practitioners and others interested in understanding the complexity of the group creative process and tapping the creative potential of groups and teams **Creativity and Intelligence** George Schlager Welsh, 1975 *Encyclopedia of Giftedness, Creativity, and Talent* Barbara Kerr, 2009-06-17 The three volume Encyclopedia of Giftedness Creativity and Talent presents state of the art research and ready to use facts from the fields of education psychology sociology and the arts **Encyclopedia of Creativity** Mark A.
