## **Creativity And Intelligence:**

**Creativity and Intelligence** Jacob W. Getzels, Phillip W. Jackson, 2011-03-10 Creativity is one of the most highly valued of human qualities It is also one of the most elusive to systematic inquiry Questions without end have been asked and re asked What is the nature of the creative process Can creative potential be identified before creative achievement What is the effect of family environment on creative development What is the relationship between creativity and personality Between creativity and intelligence We ourselves begin with the last question hoping that in the course of seeking an answer we shall throw light on the other issues The concept of intelligence and the consequent intelligence measure have been used to define individual differences in cognition as if the concept and the measure encompassed the totality of the human mind and imagination In school and more recently in other areas requiring intellectual accomplishment the IQ or some cognate of it has become the critical metric on which individuals are evaluated and sorted given preferment or denied it Individual differences in potential for productive thinking have been made synonymous with individual differences in performance on one or another of the numerous intelligence tests We began our studies with few preconceptions and few presuppositions We did not begin as is our more usual preference with an explicitly stated theoretical framework and a set of formal hypotheses Instead we permitted the behavior of the children and our own interests whatever their conceptual foundation to lead us from problem to problem and from question to question That this procedure enabled us sometimes to come upon fascinating new vistas in the behavior of children seemed worth the cost of being often lost in phenomena without relevant explicit concepts to guide our observations
