Creativity and Development R. Keith Sawyer, Vera John-Steiner, Seana Moran, Robert J. Sternberg, David Henry Feldman, Howard Gardner, Jeanne Nakamura, Mihaly Csikszentmihalyi, 2003-09-04 What is creativity and where does it come from Creativity and Development explores the fascinating connections and tensions between creativity research and developmental psychology two fields that have largely progressed independently of each other until now In this book scholars influential in both fields explore the emergence of new ideas and the development of the people and situations that bring them to fruition The uniquely collaborative nature of Oxford's Counterpoints series allows them to engage in a dialogue addressing the key issues and potential benefits of exploring the connections between creativity and development Creativity and Development is based on the observation that both creativity and development are processes that occur in complex systems in which later stages or changes emerge from the prior state of the system In the 1970s and 1980s creativity researchers shifted their focus from personality traits to cognitive and social processes and the co authors of this volume are some of the most influential figures in this shift The central focus on system processes results in three related volume themes how the outcomes of creativity and development emerge from dynamical processes the interrelation between individual processes and social processes and the role of mediating artifacts and domains in developmental and creative processes The chapters touch on a wide range of important topics with the authors drawing on their decades of research into creativity and development Readers will learn about the creativity of children's play the creative aspects of children's thinking the creative processes of scientists the role of education and teaching in creative development and the role of multiple intelligences in both creativity and development The final chapter is an important dialogue between the authors who engage in a roundtable discussion and explore key questions facing contemporary researchers such as Does society suppress children's creativity Are creativity and development specific to an intelligence or a domain What role do social and cultural contexts play in creativity and development Creativity and Development presents a powerful argument that both creativity scholars and developmental psychologists will benefit by becoming more familiar with each other's work *Perspectives on Creativity Development* Baptiste Barbot, 2016-04-04 Creativity development is a nonlinear and multifaceted process starting early in life This new thematic issue incorporates recent insights into the intersection of creativity research and developmental science Specifically it addresses the development of creativity with a focus on childhood and adolescence with a multidisciplinary perspective including developmental neurobiological intercultural educational psychosocial and differential approaches Topics covered include The foundation of adult creativity in childhood and adolescence Developmental perspectives on the issue of domain generality specificity of creativity The neurobiological basis of creativity in childhood and adolescence Commentaries by established proponents of the field integrate meaningfully these multiple insights on creativity development as a reference for developmental scientists creativity researchers and practitioners This is the 151st volume in
