Collected Works Unpublished Essays And Lectures:

Kurt Gödel: Collected Works: Volume III Kurt Gödel, 2001-06-28 Kurt Gödel 1906-1978 was the most outstanding logician of the twentieth century famous for his hallmark works on the completeness of logic the incompleteness of number theory and the consistency of the axiom of choice and the continuum hypothesis He is also noted for his work on constructivity the decision problem and the foundations of computability theory as well as for the strong individuality of his writings on the philosophy of mathematics He is less well known for his discovery of unusual cosmological models for Einstein's equations in theory permitting time travel into the past The *Collected Works* is a landmark resource that draws together a lifetime of creative thought and accomplishment The first two volumes were devoted to Gödel's publications in full both in original and translation and the third volume featured a wide selection of unpublished articles and lecture texts found in Gödel's Nachlass These long-awaited final two volumes contain Gödel's correspondence of logical philosophical and scientific interest Volume IV covers A to G with H to Z in volume V in addition Volume V contains a full inventory of Gödel's Nachlass L All volumes include introductory notes that provide extensive explanatory and historical commentary on each body of work English translations of material originally written in German some transcribed from the Gabelsberger shorthand and a complete bibliography of all works cited Kurt Gödel *Collected Works* is designed to be useful and accessible to as wide an audience as possible without sacrificing scientific or historical accuracy The only comprehensive edition of Gödel's work available it will be an essential part of the working library of professionals and students in logic mathematics philosophy history of science and computer science and all others who wish to be acquainted with one of the great minds of the twentieth century

Kurt Gödel: Collected Works: Volume II Kurt Gödel, 1990-04-05 Kurt Gödel 1906-1978 was the most outstanding logician of the twentieth century This second volume of a comprehensive edition of Gödel's works collects the remainder of his published work covering the period 1938-1974 Volume I included all of his publications from 1929-1936 Each article or closely related group of articles is preceded by an introductory note that elucidates it and places it in historical context The aim is to make the full body of Gödel's work as accessible and useful to as wide an audience as possible without in any way sacrificing the requirements of historical and scientific accuracy *Collected Works* Gödel, Kurt Friedrich Gödel, Solomon Feferman, 1986 *Husserl and the Sciences* Richard Feist, 2004 Edmund Husserl 1859-1938 is one of the previous century's most important thinkers Often regarded as the Father of phenomenology this collection of essays reveals that he is indeed much more than that The breadth of Husserl's thought is considerable and much remains unexplored An underlying theme of this volume is that Husserl is constantly returning to origins revising his thought in the light of new knowledge offered by the sciences Published in English *Gödel's Disjunction* Leon Horsten, Philip Welch, 2016 The logician Kurt Gödel in 1951 established a disjunctive thesis about the scope and limits of mathematical knowledge either the mathematical mind is not equivalent to a Turing machine i.e. a computer or there are absolutely undecidable mathematical problems In the second half

of the twentieth century attempts have been made to arrive at a stronger conclusion. In particular arguments have been produced by the philosopher J. R. Lucas and by the physicist and mathematician Roger Penrose that intend to show that the mathematical mind is more powerful than any computer. These arguments and counterarguments to them have not convinced the logical and philosophical community. The reason for this is an insufficiency of rigour in the debate. The contributions in this volume move the debate forward by formulating rigorous frameworks and formally spelling out and evaluating arguments that bear on Gödel's disjunction in these frameworks. The contributions in this volume have been written by world leading experts in the field.

Alfred Tarski and the Vienna Circle Jan Wolenski, Eckehart Köhler, 2013-03-09. The larger part of Yearbook 6 of the Institute Vienna Circle constitutes the proceedings of a symposium on Alfred Tarski and his influence on and interchanges with the Vienna Circle especially those on and with Rudolf Carnap and Kurt Gödel. It is the first time that this topic has been treated on such a scale and in such depth. Attention is mainly paid to the origins, development and subsequent role of Tarski's definition of truth. Some contributions are primarily historical, others analyze logical aspects of the concept of truth. Contributors include Anita and Saul Feferman, Jan Wolenski, Jan Tarski and Hans Sluga. Several Polish logicians contributed: Gzregorczyk, Wójcicki, Murawski and Rojszczak. The volume presents entirely new biographical material on Tarski both from his Polish period and on his influential career in the United States at Harvard, in Princeton, at Hunter and at the University of California at Berkeley. The high point of the analysis involves Tarski's influence on Carnap's evolution from a narrow syntactical view of language to the ontologically more sophisticated but more controversial semantical view. Another highlight involves the interchange between Tarski and Gödel on the connection between truth and proof and on the nature of metalanguages. The concluding part of Yearbook 6 includes documentation, book reviews and a summary of current activities of the Institute Vienna Circle. Jan Tarski introduces letters written by his father to Gödel. Paolo Parrini reports on the Vienna Circle's influence in Italy; several reviews cover recent books on logical empiricism on Gödel, on cosmology, on holistic approaches in Germany and on Mauthner.

The Nature of Physical Computation Oron Shagrir, 2022. Computing systems are ubiquitous in contemporary life. Even the brain is thought to be a computing system of sorts. But what does it mean to say that a given organ or system computes? What is it about laptops, smartphones and nervous systems that they are deemed to compute and why does it seldom occur to us to describe stomachs, hurricanes, rocks or chairs that way? These questions are key to laying the conceptual foundations of computational sciences including computer science and engineering and the cognitive and neural sciences. Oron Shagrir here provides an extended argument for the semantic view of computation which states that semantic properties are involved in the nature of computing systems. The first part of the book provides general background. Although different in scope, these chapters have a common theme, namely that the linkage between the mathematical theory of computability and the notion of physical computation is weak. The second part of the book reviews existing non-semantic accounts of physical computation. Shagrir analyzes three influential accounts in greater depth and

argues that none of these accounts is satisfactory but each of them highlights certain key features of physical computation that he eventually adopts in his own semantic account of physical computation a view that rests on a phenomenon known as simultaneous implementation or indeterminacy of computation Shagrir completes the characterization of his account of computation and highlights the distinctive feature of computational explanations

Knowledge and Time Hans Primas, 2017-05-23 This is a unique volume by a unique scientist which combines conceptual formal and engineering approaches in a way that is rarely seen Its core is the relation between ways of learning and knowing on the one hand and different modes of time on the other Partial Boolean logic and the associated notion of complementarity are used to express this relation and mathematical tools of fundamental physics are used to formalize it Along the way many central philosophical problems are touched and addressed above all the mind body problem Completed only shortly before the death of the author the text has been edited and annotated by the author's close collaborator Harald Atmanspacher

Kurt Gödel Francisco Rodriguez-Consuegra, 2011-09-27 Kurt Gödel together with Bertrand Russell is the most important name in logic and in the foundations and philosophy of mathematics of this century However unlike Russell Gödel the mathematician published very little apart from his well known writings in logic metamathematics and set theory Fortunately Gödel the philosopher who devoted more years of his life to philosophy than to technical investigation wrote hundreds of pages on the philosophy of mathematics as well as on other fields of philosophy It was only possible to learn more about his philosophical works after the opening of his literary estate at Princeton a decade ago The goal of this book is to make available to the scholarly public solid reconstructions and editions of two of the most important essays which Gödel wrote on the philosophy of mathematics The book is divided into two parts The first provides the reader with an incisive historico philosophical introduction to Gödel's technical results and philosophical ideas Written by the Editor this introductory apparatus is not only devoted to the manuscripts themselves but also to the philosophical context in which they were written The second contains two of Gödel's most important and fascinating unpublished essays 1 the Gibbs Lecture Some basic theorems on the foundations of mathematics and their philosophical implications 1951 and 2 two of the six versions of the essay which Gödel wrote for the Carnap volume of the Schilpp series *The Library of Living Philosophers* Is mathematics syntax of language 1953 1959
