Collected Works Of Leo Szilard:

The Collected Works of Leo Szilard: Scientific papers Leo Szilard, Bernard Taub Feld, Gertrud Weiss Szilard, 1972 The subtitle of this volume is exact for Leo Szilard's work ranged from physics to biology he crossed over with ease from the world of neutrons to that of neurons from the nuclei of atoms to the nuclei of cells At a deeper level all of these research activities converge unified as they are by Szilard's interest in the fundamental ideas of order and organization that underlie them all It is no accident as Jacques Monod notes in this foreword that this interest should appear explicitly as the subject of one of his very first papers and of his last In the former concerning the operations of an intelligent being on a thermodynamic system Szilard anticipated by many years the entropic formulation of information theory while the latter On Memory and Recall is concerned with the organization of the central nervous system Szilard's spontaneous unrepressed flow of ideas was followed by a critical process of selection and refinement which may account for the relatively small number of published papers under thirty found in this collection The papers are arranged chronologically and their ordering comprises a resume of Szilard's scientific life The first group of papers 1925 1939 all deal with various aspects of physics thermodynamics x ray crystallography and nuclear physics The work in this last area includes studies of neutron bombardment and of the possibilities of nuclear fission and chain reactions which Szilard was among the first to envision The second group 1940 1945 comprises the first publication of documents relating to the Manhattan Project and reflect Szilard's part in it Most of these documents were previously classified There are no scientific papers from the years 1946 1948 These were years when Szilard was intensely active in the political and social arena attempting to bring the atomic bomb under international control Documents relating to this struggle and to his earlier leadership in efforts both to undertake the atomic project and to prevent the bomb's use without warning against Japan will be collected in another volume It was also during these critical years that Szilard's interest decisively turned from physics to biology The third group covers the years 1949 1964 when Szilard's interest centered around biological problems Among these are the regulation of cellular metabolism antibody formation the aging process and the functioning of the central nervous system A final section of the book reproduces patents and patent applications of historic importance dating from 1923 to 1959 and ranging from the invention of a refrigerator jointly with Albert Einstein an application anticipating the cyclotron in 1928 and the general concepts of a nuclear chain reaction in 1934 to the first patent on the nuclear reactor granted jointly to Fermi and Szilard

Scientific Papers Leo Szilard,1972 Toward a Livable World Leo Szilard,1987 Leo Szilard conceived of the possibility
of nuclear fission sustained by a chain reaction years before it was achieved in the laboratory He was also one of the
initiators of the atomic bomb project in the United States Yet he dedicated his final years to the causes of understanding and
sustaining life The eminent physicist became a biologist and a vital force calling for the control of nuclear and other weapons
This book documents Szilard s energetic attempts to influence public policy on arms control and disarmament issues both
through open political processes and statements and through behind-the-scenes contacts with Washington power sources and
a remarkable exercise in personal diplomacy with Nikita Khrushchev Many of the issues Szilard deals with in this valuable
record of the years 1947-1963 are still crucial today His opposition to antiballistic missile systems his proposal for a
Washington-Moscow hot line his work on the Pugwash conferences that brought together scientists from the East and the
West his pivotal role in the creation of the Council for a Livable World his advocacy of a nuclear policy of no first use and
restricted retaliation and his support of minimum deterrence in place of an overwhelming counterforce capability all these
matters are as important in the 1980s as they were in the 1950s and 1960s Helen S Hawkins and G Allen Greb are affiliated
with the Institute on Global Conflict and Cooperation University of California San Diego The late Gertrud Weiss Szilard also
served as coeditor of the first two volumes of her husband s work *The Collected Works of Leo Szilard Scientific Papers* and

Chemical Warfare by Major General Amos A Fries and Clarence J West the life and letters of Manhattan Project physicist Leo
Szilard and the writings of Ted Unabomber Kaczynski Hill shows how contemporary societies are equipped with abundant
rhetorical means to describe and debate the extreme capacities of weapons to both destroy and protect The book takes a
middle way approach between language and materialism that combines traditional rhetorical criticism of texts with analyses

of the persuasive force of weapons themselves as objects irrespective of human intervention *Advocating Weapons War and Terrorism* is the first study of its kind revealing how the combination of weapons and rhetoric facilitated the magnitude of killing in the nineteenth and twentieth centuries and illuminating how humanity understands and acts upon its propensity for violence This book will be invaluable for scholars of rhetoric scholars of science and technology and the study of warfare
