Coronary Artery CTA Claudio Smuclovsky, 2009-10-03 This compendium of cardiac CT angiographic cases is a sampling of the breadth of real world cases encountered in a busy practice with examples of pathology and normal variants Dr Claudio Smuclovsky has assimilated the key image findings from cardiac CT and coupled these with complementary imaging documentation and key clinical history pieces that define the diagnosis of each case These cases include not only coronary artery anatomy anomalies and pathology but also thoracic and cardiac anomalies and pathology encountered when performing cardiac CT angiography Importantly these cases serve as examples that enhance the educational experience for less experienced interpreters while providing a reference for more experienced imagers

Documented within are also many unusual findings not routinely encountered in a low volume practice Experience and exposure to the breadth of cardiac anatomic variants and disease processes are a major component of building an imaging fund of knowledge Cases of congenital heart disease for example less frequently encountered in the adult population have important clinical and prognostic value that require communication to the referring physician These attributes may not be fully characterized or may be missed if the CT angiography CTA imager is only focused on the coronary arteries and not the entire set of images This compendium will widen the exposure of new interpreters and also serve as a reference when difficult cases are encountered Cardiac Catheterization and Angiocardiology David Verel,Ronald G.
