Astronomy On Ice:

Astronomy on Ice Martin A. Pomerantz, 2004 The story begins in 1930 with a Tenderfoot Boy Scout's first contact within hailing distance of Commander Richard Byrd and Eagle Scout Paul Siple both seated in the back of an open limousine in a ticker tape parade through Brooklyn honoring their return from their first trip to Antarctica The story ends with the author's final observing campaign at South Pole Station in 1994 and the dedication of the Martin A Pomerantz Observatory by the Directors of the National Science Foundation and its Office of Polar Programs The narrative is not strictly autobiographical but it does unfold through events and personal choices of the author along with the history of the science the evolution of the cutting edge astrophysical enterprise that is the centerpiece of the research program at the U S Amundsen Scott South Pole Station From his first taste of physics to his last trip to the South Pole *Astronomy on Ice* presents at a level aimed at an educated public the scientific research the author carried out over 50 years concentrating on his efforts to arouse interest within the astronomical community in the unique scientific resource offered by the South Pole In the face of the initially cool reception of his idea he conducted a number of experiments first bootlegged and later sanctioned with outstanding U S and foreign collaborators in multiple fields solar astronomy submillimeter astronomy ultra high energy cosmic ray and gamma ray astronomy and millimeter measurements of the microwave cosmic background radiation These experiments proved the singular advantages of working at the South Pole for each of these astrophysical subfields With instruments on the ground on ships aircraft aboard balloons and even on an early satellite the author's cosmic ray research carried him to the sub polar and north polar regions as well as to many other sites around the earth These experiences led to his initial Antarctic research in 1960 when he established the first year round cosmic ray detector at McMurdo Station In his initial visit to South Pole during the first of 26 austral summers in Antarctica the author recognized a number of potential advantages of this unique site for certain types of astronomical observations Although preliminary tests published in *Polar Research A Survey* in 1970 by the National Academy of Sciences Polar Research Board supported the idea it was not until 1979 after numerous rebuffs that the first authorized solar astronomy experiment proved that South Pole was the best site in the world for the new field of solar seismology probing the sun's heretofore invisible interior by listening to its ringing Collaborating with both domestic and foreign experts Pomerantz then conducted first time campaigns in other subfields of astronomy each revealing that South Pole was better than anyplace else on earth for conducting their specific types of astrophysical research Paradoxically manifold advantages stem from working at the earth's remote rotational axis atop the extremely cold and forbidding 9300 feet deep polar ice cap at a pressure altitude of about 12 000 feet The scope of fundamental problems studied at South Pole ranges from the nature of earth's electromagnetic environment to conditions throughout the sun's atmosphere and interior to stellar evolution to exotic physical processes in and beyond our galaxy to the beginning of structure in the Universe after its birth in the Big Bang

Astronomy on ice J.D. Shanklin, 1997 *The Telescope in the Ice* Mark Bowen, 2017-11-14 IceCube

Observatory a South Pole instrument making the first actual observations of high energy neutrinos has been called the weirdest of the seven wonders of modern astronomy by Scientific American In The Telescope in the Ice Mark Bowen tells the amazing story of the people who built the instrument and the science involved Located near the U S Amundsen Scott Research Station at the geographic South Pole IceCube is unlike most telescopes in that it is not designed to detect light It employs a cubic kilometer of diamond clear ice more than a mile beneath the surface to detect an elementary particle known as the neutrino In 2010 it detected the first extraterrestrial high energy neutrinos and thus gave birth to a new field of astronomy IceCube is also the largest particle physics detector ever built Its scientific goals span not only astrophysics and cosmology but also pure particle physics And since the neutrino is one of the strangest and least understood of the known elementary particles this is fertile ground Neutrino physics is perhaps the most active field in particle physics today and IceCube is at the forefront The Telescope in the Ice is ultimately a book about people and the thrill of the chase the struggle to understand the neutrino and the pioneers and inventors of neutrino astronomy

Ice Ages and Astronomical Causes

Richard A. Muller, Gordon J. MacDonald, 2002-08-26 It is not possible to understand the present or future climate unless scientists can account for the enormous and rapid cycles of glaciation that have taken place over the last million years and which are expected to continue into the future A great deal has happened in the theory of the ice ages over the last decade and it is now widely accepted that ice ages are driven by changes in the Earth's orbit The study of ice ages is very interdisciplinary covering geology physics glaciology oceanography atmospheric science planetary orbit calculations astrophysics and statistics
