Astronomy Through Time And Space:

Astrology in Time and Place Nicholas Campion, Dorian Gieseler Greenbaum, 2016-06-22 Astrology is the practice of relating the heavenly bodies to lives and events on earth and the tradition that has thus been generated. Many cultures worldwide have practised it in some form. In some it is rudimentary in others complex. Culture and scholarship have categorised it as both belief and science as a form of magic divination or religious practice but in many ways it defies easy categorisation. The chapters in this volume make a significant contribution to our understanding of astrology across a range of periods of cultures. Based on papers presented at the annual conference of the Sophia Centre held in 2012 the contributions range from China and Japan through India the ancient Near East the classical world and early modern Europe to Madagascar and Mesoamerica. The different topics include ritual and religion magic and science calendars and time and questions of textual transmission and methodology. *Astrology in Time and Place* is essential reading for all interested in the history of humanity's relationship with the cosmos.

Mathematics Education Across Time and Place Thomas O'Shea, 2016-05-19 What is mathematics and what aspects of it should be taught in schools? How and to whom should it be taught and how should its understanding be assessed? These questions continue to drive curriculum development, school organization, teaching methods and research agendas. No one today doubts that mathematics should be taught in our schools but this was not always so. *Mathematics Education Across Time and Place* aims to help mathematics teachers, teacher educators and anyone else interested in mathematics education appreciate the path this discipline has taken through the ages. To understand the historical and social context for schools and the place of mathematics within them we meet a variety of mathematics educators from different times and places. Though fictional their lives and social circumstances are based on historical documents and professional sources. They range from ancient Greece to modern Zimbabwe from Persia to British Columbia from Islamic Baghdad to revolutionary Paris from Elizabethan England to twentieth century New York and from the rural one room schools of North America to the modern comprehensive secondary school. By sharing the teachers' lives we come to understand how they developed their love for teaching mathematics and how their work fit into the larger social context of their time.

Space, Time, and Aliens Steven J. Dick, 2020-05-11 In this comprehensive and interdisciplinary volume former NASA Chief Historian Steven Dick reflects on the exploration of space, astrobiology and its implications, cosmic evolution, astronomical institutions, discovering and classifying the cosmos and the philosophy of astronomy. The unifying theme of the book is the connection between cosmos and culture or what Carl Sagan many years ago called the cosmic connection. As both an astronomer and historian of science Dr Dick has been both a witness to and a participant in many of the astronomical events of the last half century. This collection of papers presents his reflections over the last forty years in a way accessible to historians, philosophers and

scientists alike From the search for alien life to ongoing space exploration efforts readers will find this volume full of engaging topics relevant to science society and our collective future on planet Earth and beyond *Knowledge*, 1886
