

ATTRIBUTION PROCESSES

Introduction

Attribution study refers to the identification of causes of conduct.

Heider and Simmel carry out what appears to be the first experiment on attribution; they are interested in attribution as a perceptual process, starting from the existence of a parallel between perception of objects and social perception. They try to study how movement, temporal contiguity, spatial proximity, among other perceptual factors, give rise to impressions about behavior and its causes.

From this work to today a large area of research has been created that derives from Heider's theory and can be classified:

background study of causal attribution

study of the consequences of causal attribution.

Attribution theories

They encompass the study of the history of causal adscription; they cover topics such as motivation, stereotypes, preconceptions, etc., including:

"Kelley's Principle of Covariance"

"Jones and Davis's Theory of Corresponding Inference"

Attribution theory theories

They treat behaviors, feelings, expectations... Note:

Weiner's Theory of Achievement Motivation.

Elements of the attribution process

Are:

Observation of the action

A judgment that the act is intentional

A final inference of an underlying provision that counts the presence of intent.

Observation

In self-attribution, the same person is an actor and an observer of his own action.

When the stimulus is another person, the perceptor can observe the actor directly or through some representation, whether visual, written or verbal.
