Technology in World Civilization, revised and expanded edition Arnold Pacey, Francesca Bray, 2021-08-03 The new edition of a milestone work on the global history of technology This milestone history of technology first published in 1990 and now revised and expanded in light of recent research broke new ground by taking a global view avoiding the conventional Eurocentric perspective and placing the development of technology squarely in the context of a world civilization Case studies include technological dialogues between China and West Asia in the eleventh century medieval African states and the Islamic world and the United States and Japan post 1950 It examines railway empires through the examples of Russia and Japan and explores current synergies of innovation in energy supply and smartphone technology through African cases The book uses the term technological dialogue to challenge the top down concept of technology transfer showing instead that technologies are typically modified to fit local needs and conditions often triggering further innovation The authors trace these encounters and exchanges over a thousand years examining changes in such technologies
