

Digital vs. Analog Control

- Digital control systems are so widely used that it is rare to see a completely continuous control system (Starr, 2020).
- Intuitively, one would think that controllers that *continuously* monitor the output of a system and accordingly change their control signal would be superior to those that base their control on sampled values of the output.
- This is in fact true! Had all other factors been identical for digital and analog control, analog control would be superior to digital control.
- What, then, is the reason behind the change from analog to digital that has occurred over the past few decades?
