Machine Translation John Lehrberger, 1988 The use of the computer in translating natural languages ranges from that of a translator's aid for word processing and dictionary lookup to that of a full fledged translator on its own However the obstacles to translating by means of the computer are primarily linguistic To overcome them it is necessary to resolve the ambiguities that pervade a natural language when words and sentences are viewed in isolation The problem then is to formalize in the computer these aspects of natural language understanding The authors show how from a linguistic point of view one may form some idea of what goes on inside a system's black box given only the input original text and the raw output translated text before post editing Many examples of English French translation are used to illustrate the principles involved

Lexical-semantic Relations Petra Storjohann, 2010 This collection of articles sketches the complexity of the subject of lexical semantic relations and addresses semantic lexicographic and computational issues on an array of meaning relations in different languages It brings together a variety of linguistic studies on the contextualised construction of synonymy and antonymy in discourse It shows that research on language and cognition calls for empirical evidence from different sources This volume demonstrates how the internet corpus data as well as psycholinguistic methods contribute profitably to gain insights into the nature of the paradigmatics in actual language use Furthermore the volume is concerned with practical and application oriented research on lexical databases and it includes explorations of sense related items in dictionaries from both a text technological and lexicographic perspective

Détermination et Formalisation Xavier Blanco, Pierre-André Buvet, Zoé Gavriilidou, 2001-09-18 The contributions brought together in this volume represent the state of the art in the study of determiners which finds itself in the intersection of such fields as theoretical linguistics computational linguistics and logic The articles provide original viewpoints on determination and bring new perspectives to classic problems They concern mainly French but also a large set of other European languages They center on the lexical properties of determiners in combinations The reported research is essentially contrastive and oriented to translation and applied technological issues

La négation dans les langues romanes Franck Floricic, 2007-10-26 Negation has always been and still is a central topic in typological studies and theoretical research Its centrality shows itself in the fact that it is not restricted to a given linguistic field but compasses the whole domain of linguistic studies Very often works on negation are brought about in a one sided perspective which excludes other points of view This book on the contrary puts together studies on negation based on various theoretical frameworks and aims to cover a wide range of theoretical perspectives The book offers contributions on negation in Old Occitan in Old Italic languages and in several modern Romance languages Italian Roumanian French Spanish Occitan Catalan among others It covers the diachronic dimension of negation and explores the syntactic as well as the semantico pragmatic side of the phenomenon aspects of negative affixation provide the morphological dimension The originality of this volume thus lies in the multidisciplinary of the approaches and perspectives

offered La question de la n gation a toujours t et demeure un sujet central dans les recherches en linguistique th orique et typologique Son caract re central r side en ceci qu elle n est pas limit e un domaine linguistique donn mais embrasse le champ entier de la recherche linguistique Aussi les travaux sur la n gation sont ils tr s souvent r alis s dans une perspective donn e qui exclut de facto d autres points de vue ou d autres approches Cet ouvrage prend au contraire le parti de r unir des tudes dont les postulats th oriques et m thodologiques sont vari s couvrant ainsi un ventail de perspectives th oriques Le pr sent volume propose donc des contributions sur la n gation en Ancien Occitan dans les langues de l Italie ancienne et dans diverses langues romanes contemporaines notamment en Italien Roumain Fran ais Espagnol Occitan Catalan Il couvre ainsi la dimension diachronique de la n gation et s attache en d crire le fonctionnement d un point de vue syntaxique aussi bien que s mantico pragmatique La dimension morphologique de la n gation est galement abord e via la probl matique de l affixation n gative L originalit de cet ouvrage r side donc dans la multidisciplinarit des approches et des perspectives qu il offre
