## **Analysis And Control Of Age Dependent Population Dynamics:**

**Analysis and Control of Age-Dependent Population Dynamics** S. Anita, 2013-04-17 The material of the present book is an extension of a graduate course given by the author at the University Al I Cuza Iasi and is intended for students and researchers interested in the applications of optimal control and in mathematical biology Age is one of the most important parameters in the evolution of a biological population Even if for a very long period age structure has been considered only in demography nowadays it is fundamental in epidemiology and ecology too This is the first book devoted to the control of continuous age structured population dynamics It focuses on the basic properties of the solutions and on the control of age structured population dynamics with or without diffusion The main goal of this work is to familiarize the reader with the most important problems approaches and results in the mathematical theory of age dependent models Special attention is given to optimal harvesting and to exact controllability problems which are very important from the economical or ecological points of view We use some new concepts and techniques in modern control theory such as Clarke's generalized gradient Ekeland's variational principle and Carleman estimates The methods and techniques we use can be applied to other control problems

Theory of Nonlinear Age-Dependent Population Dynamics Glenn F. Webb, 1985-01-05 **Dynamic Perspectives on Managerial Decision Making** Herbert Dawid, Karl F. Doerner, Gustav Feichtinger, Peter M. Kort, Andrea Seidl, 2016-09-15 This volume collects research papers addressing topical issues in economics and management with a particular focus on dynamic models which allow to analyze and foster the decision making of firms in dynamic complex environments The scope of the contributions ranges from daily operational challenges firms face to strategic choices in dynamic industry environments and the analysis of optimal growth paths The volume also highlights recent methodological developments in the areas of dynamic optimization dynamic games and meta heuristics which help to improve our understanding of optimal decision making in a fast evolving economy *Studies in Evolution Equations and Related Topics* Gaston M. N'Guérékata, Bourama Toni, 2021-10-27 This volume features recent development and techniques in evolution equations by renown experts in the field Each contribution emphasizes the relevance and depth of this important area of mathematics and its expanding reach into the physical biological social and computational sciences as well as into engineering and technology The reader will find an accessible summary of a wide range of active research topics along with exciting new results Topics include Impulsive implicit Caputo fractional  $q$  difference equations in finite and infinite dimensional Banach spaces optimal control of averaged state of a population dynamic model structural stability of nonlinear elliptic  $p$  u Laplacian problem with Robin type boundary condition exponential dichotomy and partial neutral functional differential equations stable and center stable manifolds of admissible class global attractor in Alpha norm for some partial functional differential equations of neutral and retarded type and more Researchers in mathematical sciences biosciences computational sciences and related fields will benefit from the rich and useful resources provided Upper undergraduate and graduate students may be inspired

**Mathematical Modeling and Control in Life and Environmental Sciences** Sebastian Anița, Vincenzo Capasso, Simone Scacchi, 2024-04-29 This monograph explores the use of mathematical modeling and control theory in a variety of contemporary challenges in mathematical biology and environmental sciences Emphasizing an approach of learning by doing the authors focus on a set of significant case studies emerging from real world problems and illustrate how mathematical techniques and computational experiments can be employed in the search for sustainable solutions The following topics are extensively discussed Eradicability and control of a paradigmatic epidemic model with a view to the existence of endemic states their stability and the existence of travelling waves A spatially structured epidemic model concerning malaria as an example of vector borne epidemics Optimal harvesting problems for space structured and age structured population dynamics Controlling epidemics in agriculture due to pest insects The role of predators as a possible biocontrol agent of epidemics in agriculture Control by taxation of the environmental pollution produced by human activities The originality of this text is in its leitmotif regional control along the principle of Think Globally Act Locally Indeed for example in many real spatially structured ecosystems it is practically impossible to control the relevant system by global interventions in the whole habitat Proofs are given whenever they may serve as a guide to the introduction of new concepts Each chapter includes a comprehensive description of the numerical methods used for the computational experiments and MATLAB codes for many of the numerical simulations are available for download Several challenging open problems are also provided to stimulate future research This text is aimed at mathematicians engineers and other scientists working in areas such as biology medicine and economics Graduate and advanced undergraduate students of a quantitative subject related to the analysis and applications of dynamical systems and their control will also find it to be a valuable resource
