Analysis And Geometry In Foliated Manifolds:

Analysis And Geometry In Foliated Manifolds - Proceedings Of The 7th International Colloquium On Differential Geometry Enrique Macias-virgos, Jesus A Alvarez Lopez, Xose Masa, 1995-11-17 The subject of this volume recent developments in foliation theory and important related analytic and geometric techniques is an active field in the application of both global analysis and geometric topological theory of manifolds to the study of foliations This volume includes research papers by leading specialists giving an overview of this subject [Analysis and Geometry in Foliated Manifolds](#) Xosé Masa, Enrique Macias-Virgós, 1995 **Analysis and Geometry in Foliated Manifolds**, 1995 [Foliations: Geometry And Dynamics - Proceedings Of The Euroworkshop](#) Lawrence Conlon, Remi Langevin, Takashi Tsuboi, Pawel Walczak, 2002-02-01 This volume contains surveys and research articles regarding different aspects of the theory of foliation The main aspects concern the topology of foliations of low dimensional manifolds the geometry of foliated Riemannian manifolds and the dynamical properties of foliations Among the surveys are lecture notes devoted to the analysis of some operator algebras on foliated manifolds and the theory of confoliations objects defined recently by W Thurston and Y Eliashberg situated between foliations and contact structures Among the research articles one can find a detailed proof of an unpublished theorem due to Duminy concerning ends of leaves in exceptional minimal sets *Geometry of Foliations* Philippe Tondeur, 1997-05 Surveys research over the past few years at a level accessible to graduate students and researchers with a background in differential and Riemannian geometry Among the topics are foliations of codimension one holonomy Lie foliations basic forms mean curvature the Hodge theory for the transversal Laplacian applications of the heat equation method to Riemannian foliations the spectral theory Connes perspective of foliations as examples of non commutative spaces and infinite dimensional examples The bibliographic appendices list books and surveys on particular aspects of foliations proceedings of conferences and symposia all papers on the subject up to 1995 and the numbers of papers published on the subject during the years 1990 95 Annotation copyrighted by Book News Inc Portland OR

C*-algebras and Elliptic Theory II Dan Burghelea, Richard Melrose, Alexander S. Mishchenko, Evgenij V. Troitsky, 2008-03-18 This book consists of a collection of original refereed research and expository articles on elliptic aspects of geometric analysis on manifolds including singular foliated and non commutative spaces The topics covered include the index of operators torsion invariants K theory of operator algebras and L2 invariants There are contributions from leading specialists and the book maintains a reasonable balance between research expository and mixed papers *Spectrum and Dynamics* Dmitry Jakobson, Stephane Nonnenmacher, Iosif Polterovich, 2010-01-01 This volume contains a collection of papers presented at the workshop on Spectrum and Dynamics held at the CRM in April 2008 In recent years many new exciting connections have been established between the spectral theory of elliptic operators and the theory of dynamical systems A number of articles in the proceedings highlight these discoveries The volume features a diversity of topics Such as quantum

chaos spectral geometry Semiclassical analysis number theory and ergodic theory Apart from the research papers aimed at the experts this book includes several survey articles accessible to a broad mathematical audience

Generic Coarse Geometry of Leaves Jesús A. Álvarez López, Alberto Candel, 2018-07-28 This book provides a detailed introduction to the coarse quasi isometry of leaves of a foliated space and describes the cases where the generic leaves have the same quasi isometric invariants Every leaf of a compact foliated space has an induced coarse quasi isometry type represented by the coarse metric defined by the length of plaque chains given by any finite foliated atlas When there are dense leaves either all dense leaves without holonomy are uniformly coarsely quasi isometric to each other or else every leaf is coarsely quasi isometric to just meagerly many other leaves Moreover if all leaves are dense the first alternative is characterized by a condition on the leaves called coarse quasi symmetry Similar results are proved for more specific coarse invariants like growth type asymptotic dimension and amenability The Higson corona of the leaves is also studied All the results are richly illustrated with examples The book is primarily aimed at researchers on foliated spaces More generally specialists in geometric analysis topological dynamics or metric geometry may also benefit from it

Foliations: Dynamics, Geometry and Topology Masayuki Asaoka, Aziz El Kacimi Alaoui, Steven Hurder, Ken Richardson, 2014-10-07 This book is an introduction to several active research topics in Foliation Theory and its connections with other areas It contains expository lectures showing the diversity of ideas and methods converging in the study of foliations The lectures by Aziz El Kacimi Alaoui provide an introduction to Foliation Theory with emphasis on examples and transverse structures Steven Hurder's lectures apply ideas from smooth dynamical systems to develop useful concepts in the study of foliations limit sets and cycles for leaves leafwise geodesic flow transverse exponents Pesin Theory and hyperbolic parabolic and elliptic types of foliations The lectures by Masayuki Asaoka compute the leafwise cohomology of foliations given by actions of Lie groups and apply it to describe deformation of those actions In his lectures Ken Richardson studies the properties of transverse Dirac operators for Riemannian foliations and compact Lie group actions and explains a recently proved index formula Besides students and researchers of Foliation Theory this book will be interesting for mathematicians interested in the applications to foliations of subjects like Topology of Manifolds Differential Geometry Dynamics Cohomology or Global Analysis

Mathematical Reviews, 2005 [Foliations on Riemannian Manifolds](#) Philippe Tondeur, 2012-12-06 A first approximation to the idea of a foliation is a dynamical system and the resulting decomposition of a domain by its trajectories This is an idea that dates back to the beginning of the theory of differential equations in the seventeenth century Towards the end of the nineteenth century Poincaré developed methods for the study of global qualitative properties of solutions of dynamical systems in situations where explicit solution methods had failed He discovered that the study of the geometry of the space of trajectories of a dynamical system reveals complex phenomena He emphasized the qualitative nature of these phenomena thereby giving strong impetus to topological methods A second approximation is the idea of a foliation as a decomposition of a manifold into

submanifolds all being of the same dimension Here the presence of singular submanifolds corresponding to the singularities in the case of a dynamical system is excluded This is the case we treat in this text but it is by no means a comprehensive analysis On the contrary many situations in mathematical physics most definitely require singular foliations for a proper modeling The global study of foliations in the spirit of Poincare was begun only in the 1940 s by Ehresmann and Reeb

Global Analysis on Foliated Spaces Calvin C. Moore, Claude L. Schochet, 2006 This book presents a complete proof of Connes Index Theorem generalized to foliated spaces including coverage of new developments and applications

Riemannian Foliations Molino, 2012-12-06 Foliation theory has its origins in the global analysis of solutions of ordinary differential equations on an n dimensional manifold M an autonomous differential equation is defined by a vector field X if this vector field has no singularities then its trajectories form a partition of M into curves i e a foliation of codimension $n - 1$ More generally a foliation F of codimension q on M corresponds to a partition of M into immersed submanifolds the leaves of dimension $p = n - q$ The first global image that comes to mind is that of a stack of plaques Viewed laterally transversally the leaves of such a stacking are the points of a quotient manifold W of dimension q $W = M / F$ Actually this image corresponds to an elementary type of foliation that one says is simple For an arbitrary foliation it is only locally on a simple open set U that the foliation appears as a stack of plaques and admits a local quotient manifold Globally a leaf L may return and cut a simple open set U in several plaques sometimes even an infinite number of plaques

Foliations and Geometric Structures Aurel Bejancu, Hani Reda Farran, 2006-01-17 Offers basic material on distributions and foliations This book introduces and builds the tools needed for studying the geometry of foliated manifolds Its main theme is to investigate the interrelations between foliations of a manifold on the one hand and the many geometric structures that the manifold may admit on the other hand

Foliations in Cauchy-Riemann Geometry Elisabetta Barletta, Sorin Dragomir, Krishan L. Duggal, 2007 The authors study the relationship between foliation theory and differential geometry and analysis on Cauchy Riemann CR manifolds The main objects of study are transversally and tangentially CR foliations Levi foliations of CR manifolds solutions of the Yang Mills equations tangentially Monge Ampere foliations the transverse Beltrami equations and CR orbifolds The novelty of the authors approach consists in the overall use of the methods of foliation theory and choice of specific applications Examples of such applications are Reas holomorphic extension of Levi foliations Stanton s holomorphic degeneracy Boas and Straube s approximately commuting vector fields method for the study of global regularity of Neumann operators and Bergman projections in multi dimensional complex analysis in several complex variables as well as various applications to differential geometry Many open problems proposed in the monograph may attract the mathematical community and lead to further applications of
