Analysis of Biological Molecules G.W. Potter, Geoffrey W. H. Potter, 1995 This introductory book is for students on degree or HNC D courses with a biological content requiring familiarity with modern laboratory instruments and analytical techniques Numerous diagrams in text questions and comments challenge the reader to interact with rather than passively accept the material

Mass Spectrometry in the Biological Sciences: A Tutorial M.L Gross, 2012-12-06 The developments in mass spectrometry over the past fifteen years have been impressive in their implications in bioanalytical chemistry The achievements begin with the inventions of Cf 252 Plasma Desorption Mass Spectrometry by Macfarlane and Fourier Transform Mass Spectrometry by Comisarow and Marshall in the mid 1970s The former showed the feasibility of producing large gas phase ions from large biomolecules whereas the latter enhanced the capabilities for ion trapping especially in analytical mass spectrometry A major achievement was the development by Barber of Fast Atom Bombardment FAB mass spectrometry an advance that heralded a new era in biological mass spectrometry Contemporary and routine instruments such as magnetic sectors and quadrupoles were rapidly adapted to FAB and nearly the entire universe of small molecules became amenable to study by mass spectrometry The introduction of FAB also paved the way for improvement of instrument capability For example the upper mass limit of magnet sector mass spectrometers was increased by nearly an order of magnitude by the instrument manufacturers Furthermore the technique of tandem mass spectrometry MS MS was given new meaning because important structural information for biomolecules could now be produced for ions introduced by FAB into the tandem instrument The evolution of MS MS continues today with the development of ion traps time of flight and sector instruments equipped with array detection

New Techniques for Studying Biomembranes Qiu-Xing Jiang, 2020-03-18 New Techniques for Studying Biomembranes describes some of the latest methods used to investigate the dynamic distribution of specific lipids in membranes and their effects on other membrane components The contributors present important discoveries with respect to lipid analysis and lipid interactions with membrane proteins Various methods which have been used to study lipid bilayer structure and lipid organization in membranes include both in vitro and in vivo membrane systems and study membrane proteins in various membrane systems Key Features Reviews both in vivo and in vitro analytical technologies and methods for studying membrane structure and function Explores how lipid bilayers and membrane proteins interact Includes contributions from an international team of researchers actively studying membrane structure and function Identifies various diseases whose causes are related to membrane proteins Related Titles Christopher R Jacobs Hayden Huang and Ronald Y Kwon Introduction to Cell Mechanics and Mechanobiology ISBN 978 0 8153 4425 4 Wendell Lim and Bruce Mayer Cell Signaling Principles and Mechanisms ISBN 978 0 8153 4244 1 Stephen Rothman Proteins Crossing Membranes A Scientist s Memoir 978 0 3670 7449 4
