Analysis of Free Radicals in Biological Systems A. Favier, J. Cadet, B. Kalyanaraman, M. Fontecave, J.L. Pierre, 2012-12-06
Oxidative stress is used as the generic term describing the involvement of reactive oxygen species in various human diseases. The scope of such a topic is becoming increasingly wide. The recent interest in radicals such as nitric oxide and the discovery of new mechanisms such as the effect of free radicals on redox sensitive proteins and genes are enlarging our understanding of the physiological role of free radicals. Oxidative stress is involved in numerous pathological processes such as ageing, respiratory or cardiovascular diseases, cancer, neurological pathologies such as dementia or Parkinson's disease. It still remains difficult however to demonstrate by chemical measurement the in vivo production of free radicals and even more to realise their speciation. Therefore the development of new tools and indicators is engrossing many researchers working in this field. Reliable indicators are also utterly necessary not only to monitor the evolution of oxidative stress in patients but also to evaluate the efficiency of new antioxidant treatments. The French Free radical club of Grenoble the CERLIB has been involved for many years in the organisation of international training programs on methodology in order to provide both theoretical and practical help to researchers from various countries. Such training sessions have been highly successful and participants value the opportunity to learn reliable techniques. This positive echo explains why the researchers of CERLIB decided with the help of Prof Dr B Kalyanaraman to publish selected techniques on free radical research. *Free Radicals and Oxidation Phenomena in Biological Systems* Roberfroid, 1994-12-14. This work offers an analysis of the biological processes mediated by free radicals from a toxicological point of view providing easy access to information in an integrated coherent presentation. The chemistry and biochemistry of all principal types of radical are explained and the multiple forms in which radicals participate in living organisms are investigated. This work should be of use to biochemists, pharmacologists, pharmaceutical researchers, food scientists and technologists, nutritionists, toxicologists, chemists, biologists and graduate students in these disciplines.

Ultra-Weak Photon Emission from Biological Systems Ilya Volodyaev, Eduard van Wijk, Michal Cifra, Yury A. Vladimirov, 2023-12-13. This book addresses the phenomenon of biological autoluminescence also known as ultraweak photon emission (UPE), biochemiluminescence or biophotons and deals with a very broad spectrum of subjects ranging from basic observational studies to molecular mechanisms, free radical processes, physics of electron excitation and photon emission as well as detection techniques. The chapter topics include UPE in plants, animals and the human body, microorganisms and subcellular structures and model systems illustrating its high prevalence. Several sections of the book provide some backstory with emphasis on methodology, unresolved questions and existing controversies. The authors raise and discuss complex, potentially divisive aspects: Are there any reasons to assume the existence of non-chemical interaction in biological systems? Can research results in the field of mitogenetic radiation, delayed luminescence and oxychemiluminescence of model systems be correctly interpreted? What does the future hold for this area of research?

Altogether this publication gives the reader a thorough overview of biological autoluminescence UPE biophotonics research making it ideal for students and researchers who are new to the area as well as those who are specializing in it
