Analytic Theory Of Multiplicative Galois Structure:

The Analytic Theory of Multiplicative Galois Structure Ted Chinburg, 1989 Multiplicative Galois Module Structure Alfred Weiss, 1996 This text is the result of a short course on the Galois structure of S units that was given at The Fields Institute in the autumn of 1993 Offering a new angle on an old problem the main theme is that this structure should be determined by class field theory in its cohomological form and by the behaviour of Artin L functions at $s = 0$ A proof of this or even a precise formulation is still far away but the available evidence all points in this direction The work brings together the current evidence that the Galois structure of S units can be described This is intended for graduate students and research mathematicians specifically algebraic number theorists Algebraic K-theory Victor Percy Snaith, Robert Wayne Thomason, 1997-01-01 The conference proceedings volume is produced in connection with the second Great Lakes K theory Conference that was held at The Fields Institute for Research in Mathematical Sciences in March 1996 The volume is dedicated to the late Bob Thomason one of the leading research mathematicians specializing in algebraic K theory In addition to research papers treated directly in the lectures at the conference this volume contains the following i several timely articles inspired by those lectures particularly by that of V Voevodsky ii an extensive exposition by Steve Mitchell of Thomason's famous result concerning the relationship between algebraic K theory and étale cohomology iii a definitive exposition by J L Colliot-Thélène R Hoobler and B Kahn explaining and elaborating upon unpublished work of O Gabber of Bloch-Ogus-Gersten type resolutions in K theory and algebraic geometry This volume will be important both for researchers who want access to details of recent development in K theory and also to graduate students and researchers seeking good advanced exposition The Second Chinburg Conjecture for Quaternion Fields Jeff Hooper, Victor Percy Snaith, Minh Van Tran, 2000 The Second Chinburg Conjecture relates the Galois module structure of rings of integers in number fields to the values of the Artin root number on the symplectic representations of the Galois group This book establishes the Second Chinburg Conjecture for various quaternion fields **Algebra** I.B.S. Passi, 2012-12-06 The Indian National Science Academy has planned to bring out monographs on special topics with the aim of providing accessible surveys/reviews of topics of current research in various fields Prof S K Malik FNA Editor of Publications INSA asked me in October 1997 to edit a volume on algebra in this series I invited a number of algebraists several of them working in group rings and it is with great satisfaction and sincere thanks to the authors that I present here in Algebra Some Recent Advances the sixteen contributions received in response to my invitations I B S Passi On Abelian Difference Sets K r Arasu and Surinder K Sehgal 1 Introduction We review some existence and nonexistence results new and old on abelian difference sets Recent surveys on difference sets can be found in Arasu 1990 Jungnickel 1992a b Pott 1995 Jungnickel and Schmidt 1997 and Davis and Jedwab 1996 Standard references for difference sets are Baumert 1971 Beth et al 1998 and Lander 1983 This article presents a flavour of the subject by discussing some selected topics Difference sets are very important in combinatorial design theory and in commu
