Harry Brearley, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1903 edition Excerpt Carbon dioxide must also be separately determined The following analyses are of commercial prepared originally by reducing the chloride with potassium and this process or some modification of it was the only one available until a few years ago Moissan prepared cast uranium by submitting an intimate mixture of the oxide and sugar charcoal contained in a coke crucible to the electric current He isolated a crystallized carbide C_3U_2 whose melting point is much higher than that of platinum and he prepared samples of the metal containing less than 1 per cent of impurities On this latter metal and other samples prepared by the electrolysis of the double uranium sodium chloride $UCl_4 \cdot 2NaCl$ he determined some of its properties Ferro uranium alloys are formed by the last mentioned process when iron electrodes are used The metal and some of its alloys have been prepared by various modified forms of the aluminothermic process the author however found this method to yield poor and very uncertain results Pure uranium is a white non magnetic metal and can be easily filed it does not scratch glass is easily carbonized and may be tempered Its specific gravity is said to be about 18.7 but the carbonized metal usually met with has a specific gravity of about 12 only When in fine powder the metal burns at a comparatively low temperature 170 in pure oxygen and also very readily combines with nitrogen It tarnishes on exposure to air and also decomposes water to some extent particularly if heated Metallic uranium is decomposed by dilute hydrochloric acid but black flocks of carbide persist until a few drops of nitric acid have been added With ferro uranium alloys or uranium steels it is

advisable to filter off this **The Analytical Chemistry of Uranium (Classic Reprint)** Harry Brearley,2015-06-29 Excerpt from The Analytical Chemistry of Uranium Any one desirous of mastering the practical determination of any metal in its ores and in the commercial products whose value it influences perhaps could do no better if immediate results were of no consequence than to choose a gravimetric and a volumetric process which worked well with pure solutions of the metals salts and then to set about observing the influence exerted by variations in the mode of operating and by the presence of other metallic salts Such a procedure at any rate usually gives ultimate satisfaction and confidence and makes valuable additions to ones permanent knowledge of chemical facts as well as now and again eliminates some fictions About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
