Analytical Aspects Of Atomic Laser Spectrochemistry:

Analytical Aspects of Atomic Laser Spectrochemistry Kay Niemax, 1989 The development of a reliable continuously tunable laser has produced a strong revival in atomic and molecular spectroscopy allowing the more precise measurement of spectral wavelengths of transitions the performance of various sorts of Doppler free high resolution spectroscopy and the collection of spectral information with high sensitivity from a small ensemble of particles This review discusses the possibilities of the method and its inherent problems Tunable lasers must be made easier to operate more stable and less expensive It is suggested that the semiconductor diode laser could be the solution to these problems if it is properly developed *Optical Oscillators with Degenerate Four-wave Mixing (dynamic Grating Lasers)* Sergeï Georgievich Odulov, Marat Samuilovich Soskin, 1991

Optical Parametric Generation and Amplification Jing-Yuan Zhang, 2019-01-22 This volume considers optical parametric generation and amplification OPA OPG as a means for producing a tunable optical parametric device It reviews the OPA OPG systems using various crystals pumped by lasers at various frequencies with pulse duration ranging from picoseconds to femtoseconds Part two covers the theoretical background for design of an OPA OPG system using two newly discovered nonlinear crystals Experimental design considerations are discussed in section three including the section of nonlinear crystals pumping sources and optical configurations In section four the experimental results obtained are compared with the theoretical calculations
