Emon,2008-10-19 This book is a tutorial designed to instruct the reader in use and application of immunochemical methods of analysis for environmental contaminants A brief introduction describes basic principles and the advantages and disadvantages of the technology and gives a listing of references which supply more detail Preparation of the laboratory for use of this technology and the general scientific considerations prior to using the technology are discussed Detailed step wise procedures are given for analysis of selected analytes triazine herbicides carbaryl paraquat and p nitrophenols etc In addition to the specific immunoassay methods a series of support techniques necessary to perform immunochemical methods are described This book provides specific instruction for certain analytes but also serves to familiarize the novice reader with many generic concepts needed to successfully utilize immunochemistry technology including applications sampling sample preparation extraction cleanup quality assurance methods development and optimization data handling and troubleshooting It is not necessary for the reader to actually perform the immunoassays given in this user s guide to obtain familiarity with these concepts The guide is written so that the information presented can be applied to other immunoassays not given here Thus the strength of the guide is its universal applicability to immunoassay methods **Physical and Chemical Methods**

Curtis A. Williams,Merrill W. Chase,2014-05-12 Methods in Immunology Volume II Physical and Chemical Methods is a collection of papers dealing with electrophoresis analytical ultracentrifugation dialysis ultrafiltration cellulose ion exchangers and chromatographic separation of macromolecules on porous gels Some papers explain the applications of radioisotopes optical analysis and chemical analysis of proteins carbohydrates lipids and nucleic acid One paper describes the theory of electro migration Factors such as electrical charge or frictional coefficients govern the rate of migration of charged particles in an electric field The differences found in their velocities can be used to separate substances or analyze them Mobility is a characteristic property of molecules and can also be influenced by the composition of the medium or solution Dialysis separates solvents too large to diffuse through a barrier from smaller solutes ultrafiltration reverse osmosis forces solvent and solutes up to a certain critical size through the barrier by a high pressure on one side The book notes that the membrane never becomes plugged in dialysis because of some opposite movement of the solvent Another paper points out that the significance of radioactive tracers in immunochemistry employed to identify and label macromolecules functioning as antigens and antibodies The collection can prove valuable to bio chemists cellular biologists micro biologists developmental biologists and scientists involved in immunological research Methods in Immunology and Immunochemistry: Reactions of antibodies with soluble antigens Curtis Alvin Williams,1967 Immunochemical Methods for Environmental Analysis

Jeanette M. Van Emon,1990 Presents 18 papers from a symposium at the American Chemical Society meeting in Miami September 1989 Researchers from academia and the chemical industry report recent advances in using immunochemical methods to detect a variety of environmental contaminants They introduce the non specialist to the principles procedures advantages and limitations of the methods and speculate on anticipated requirements of regulatory agencies Annotation
