# Linear Transformation
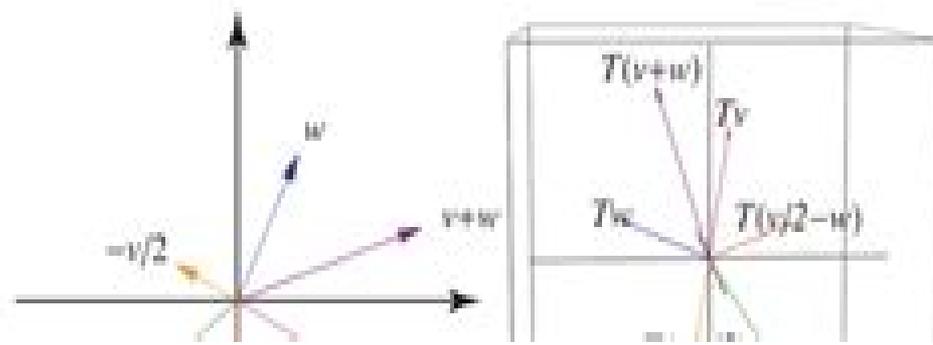

A linear transformation between two vector spaces $V$ and $W$ is a map $T : V \to W$ such that the following hold:

1. $T(v_1 + v_2) = T(v_1) + T(v_2)$ for any vectors $v_1$ and $v_2$ in $V$, and

2. $T(\alpha v) = \alpha T(v)$ for any scalar $\alpha$.

A linear transformation may or may not be injective or surjective. When $V$ and $W$ have the same dimension, it is possible for $T$ to be invertible, meaning there exists a $T^{-1}$ such that $T T^{-1} = I$. It is always the case that $T(0) = 0$. Also, a linear transformation always maps lines to lines (or to zero).

Farenick,2014-01-15    **Transform Linear Algebra** Frank Uhlig,1999    Linear Algebra Toshitsune Miyake,2022-09-03 The purpose of this book is to explain linear algebra clearly for beginners In doing so the author states and explains somewhat advanced topics such as Hermitian products and Jordan normal forms Starting from the definition of matrices it is made clear with examples that matrices and matrix operation are abstractions of tables and operations of tables The author also maintains that systems of linear equations are the starting point of linear algebra and linear algebra and linear equations are closely connected The solutions to systems of linear equations are found by solving matrix equations in the row reduction of matrices equivalent to the Gauss elimination method of solving systems of linear equations The row reductions play important roles in calculation in this book To calculate row reductions of matrices the matrices are arranged vertically which is seldom seen but is convenient for calculation Regular matrices and determinants of matrices are defined and explained Furthermore the resultants of polynomials are discussed as an application of determinants Next abstract vector spaces over a field K are defined In the book however mainly vector spaces are considered over the real number field and the complex number field in case readers are not familiar with abstract fields Linear mappings and linear transformations of vector spaces and representation matrices of linear mappings are defined and the characteristic polynomials and minimal polynomials are explained The diagonalizations of linear transformations and square matrices are discussed and inner products are defined on vector spaces over the real number field Real symmetric matrices are

considered as well with discussion of quadratic forms Next there are definitions of Hermitian inner products Hermitian transformations unitary transformations normal transformations and the spectral resolution of normal transformations and matrices are explained The book ends with Jordan normal forms It is shown that any transformations of vector spaces over the complex number field have matrices of Jordan normal forms as representation matrices *Linear Transformations and Matrices* Frederick Arthur Ficken,1964
