An Introduction To Macromolecules:

An Introduction to Macromolecules L. Mandelkern, 2012-12-06 The reception of the original volume by students pedagogues and reviewers has been most gratifying It appears to have both satisfied a need and served a useful educational purpose Hence some ten years later it has been deemed advisable to bring it up to date if only in a slightly expanded form The purpose for writing this book and its level remain the same Many new polymers have been synthesized in the last decade that have found meaningful and novel uses Examples of these applications are included in this new edition Major advances have also been made in biophysics and in molecular biology as well as in our understanding of natural processes on a molecular level Foremost among these has been the development of recombinant DNA technology With it has come the potential for large scale synthesis of hormones and proteins These new developments have also been incorporated into the present volume It is my hope that this new edition will still have a widespread appeal to students in all of the natural sciences whatever their major interest It should also be of use and interest to those starting industrial or academic careers who have not had an extensive background in macromolecular science

An Introduction to Macromolecules L. Mandelkern, 1973-01-02 The purpose of this volume is to provide beginning students in the natural sciences with a very elementary introduction to the structure and properties of macromolecular substances Most students either those who are science majors or those in a liberal art program do not usually have the opportunity to learn about this important class of molecules until they take advanced courses at a senior or graduate level There is thus a serious gap in our educational processes which has become acute with the widespread recognition of the important role played by macromolecules in biological systems their extensive use in a myriad of articles of commerce and their intrinsic scientific interest We have attempted to rectify this deficiency by presenting a detailed but nonmathematical description of all classes of macromolecules Macromolecules are a unique class of substances in that they are molecules of extremely high molecular weight When certain common structural features are recognized among the different kinds of macromolecules they can be treated and analyzed from a unified point of view With this approach we can discuss in one volume macromolecules of biological interest as well as synthetic materials such as rubbers glasses coatings and fibers
