## Analogical Reasoning in Children

Usha Goswami

Analogical thinking lies at the core of human creativity. It has been argued that the very act of forming an analogy requires a kind of “mental leap,” inasmuch as it necessitates seeing one thing as if it were another (Holyoak and Thagard 1995). Famous analogies in science frequently reveal their inventor’s ability to make these mental leaps. However, as well as being an important cognitive mechanism in creative thinking, analogy is the basis of much of our everyday problem solving. Small-scale mental leaps are being made all the time by children and adults and form a core part of our everyday mental repertoire. This chapter examines the availability of analogical reasoning to young children. Far from being a sophisticated reasoning strategy characteristic of older children and adults, it will be argued that analogical reasoning is available from infancy onward. “Analogy pervades all our thinking, our everyday speech and our trivial conclusions as well as artistic ways of expression and the highest scientific achievements” (Polya 1957).

### The Development of Analogical Reasoning

The study of analogical development was pioneered by Piaget, who examined analogical reasoning in children from five to twelve years of age (Piaget, Montangero, and Billeter 1977). More recently, analogical reasoning in children as young as one and two has been reported. There is still considerable debate about what constitutes a proper analogy, particularly in a toddler.

## **Analogical Reasoning In Children:**

**Analogical Reasoning in Children** Usha Goswami,2013-10-23 Analogical reasoning is a fundamental cognitive skill involved in classification learning problem solving and creative thinking and should be a basic building block of cognitive development However for a long time researchers have believed that children are incapable of reasoning by analogy This book argues that this is far from the case and that analogical reasoning may be available very early in development Recent research has shown that even 3 year olds can solve analogies and that infants can reason about relational similarity which is the hallmark of analogy The book traces the roots of the popular misconceptions about children s analogical abilities and argues that when children fail to use analogies it is because they do not understand the relations underlying the analogy rather than because they are incapable of analogical reasoning The author argues that young children spontaneously use analogies in learning and that their analogies can sometimes lead them into misconceptions In the real worlds of their classrooms children use analogies when learning basic skills like reading and even babies seem to use analogies to learn about the world around them *An Analysis of Analogical Reasoning in Children* Philip Jack Levinson,1973 **Children's Development of Analogical Reasoning** □□□, Tsz-Kit Chan,2017-01-27 This dissertation Children s Development of Analogical Reasoning A Study in Hong Kong by Tsz kit Chan was obtained from The University of Hong Kong Pokfulam Hong Kong and is being sold pursuant to Creative Commons Attribution 3 0 Hong Kong License The content of this dissertation has not been altered in any way We have altered the formatting in order to facilitate the ease of printing and reading of the dissertation All rights not granted by the above license are retained by the author Abstract ANALOGICAL REASONING 2 Abstract With a Hong Kong Chinese sample two experiments were conducted to examine 3 to 4 year olds development of analogical reasoning The first was to replicate Richland Morrison and Holyoak s 2006 findings on American children By manipulating the relational complexity and perceptual distraction of analogy problems cultural difference on the development of analogical reasoning was investigated Second it was to examine the role of working memory when children were doing analogy problems in which they were required to remember either number digits phonological memory load or basic shapes visual memory load Results suggested that the Hong Kong Chinese sample outperform their western counterparts in more complex relation analogy problems Imposing modest memory load on the children when they were doing analogy problems did not seem to affect their ability to give correct relational responses to the analogy problems but it may lead to children commit more relational errors Results might give some insights on the cultural differences on the development of analogical reasoning Keywords analogical reasoning scene analogy problems memory load DOI 10 5353/th\_b3709037 Subjects Reasoning in children *Mathematical and Analogical Reasoning of Young Learners* Lyn D. **Mediated Learning and Cognitive Modifiability** David Tzuriel,2021-09-07 This book portrays an extensive and intensive discussion of theories and research that refer to Vygotsky s and Feuerstein s theories of mediated learning and their effects on learning potential and cognitive modifiability Most topics are discussed in relation to a broad spectrum of developmental and cognitive research that are under the conceptual umbrella of mediated learning and cognitive modifiability Some topics such as neural plasticity executive functions mental rotation and cognitive education are related to mediated learning though indirectly and therefore are included in this book In

many ways the book presents an extension of Vygotsky and Feuerstein's theories and empirical validation in a variety of family social and cultural contexts. The book includes a thorough analysis and summary of 50 years of research and methodology of the intimate relation between mediated learning interactions and cognitive modifiability and of dynamic assessment underlying measurement of cognitive modifiability. Special emphasis is given to Tzuriel's dynamic assessment instruments developed during more than four decades. Tzuriel's novel instruments are interwoven in the extensive research on parent-child interactions, siblings, teachers and peers, mediation and in validation of dynamic assessment approach and cognitive education programs aimed at development of thinking skills and academic achievements.

This volume bringing together a number of experts in their respective fields represents an important contribution to the topic of science and mathematics education. The contributions deal with various aspects of education including epistemology, theoretical modelling, environmental sensitivity, probability distribution, technological pedagogical content knowledge, model eliciting activity and reasoning skills. As such, the book provides the reader with insights into science and mathematics education from various perspectives.

*Children's Understanding* Graeme S. Halford, 2014-02-25 This work argues that cognitive development is experience-driven and processes entailed in acquiring information about the world are analyzed based on recent models of learning and induction. The way information is represented and accessed when performing cognitive tasks is considered, paying particular attention to the implications of Parallel Distributed Processing (PDP) models for cognitive development. The first half of the book contains analyses of human reasoning processes drawing on PDP models of analogy, development of strategies and task complexity, all based on aspects of PDP representations. It is proposed that PDP representations become more differentiated with age so more vectors can be processed in parallel with the result that structures of greater complexity can be processed. This model gives an account of previously unexplained difficulties in children's reasoning including some which were influential in stage theories. The second half of the book examines processes entailed in some representative cognitive developmental tasks including transitive inference, deductive inference, categorical syllogisms, hypothesis testing, learning set acquisition, acquisition and transfer of relational structures, humor, hierarchical classification and inclusion, understanding of quantity, arithmetic word problems, algebra, conservation, mechanics and the concept of mind. Process accounts of tasks are emphasized based on applications of recent developments in cognitive science.
