An Introduction to Modern Vehicle Design Julian Happian-Smith, 2001 An Introduction to Modern Vehicle Design provides a thorough introduction to the many aspects of passenger car design in one volume Starting with basic principles the author builds up analysis procedures for all major aspects of vehicle and component design Subjects of current interest to the motor industry such as failure prevention designing with modern materials ergonomics and control systems are covered in detail and the author concludes with a discussion on the future trends in automobile design With contributions from both academics lecturing in motor vehicle engineering and those working in the industry An Introduction to Modern Vehicle Design provides students with an excellent overview and background in the design of vehicles before they move on to specialised areas Filling the niche between the more descriptive low level books and books which focus on specific areas of the design process this unique volume is essential for all students of automotive engineering

Handbook of Automotive Design Analysis John Fenton, 2013-10-22 Handbook of Automotive Design Analysis examines promising approaches to automotive design analysis The discussions are organized based on the major technological divisions of motor vehicles the transmission gearbox and drive line steering and suspension and the automobile structure This handbook is comprised of three chapters the first of which deals with transmission gearboxes and drive lines This chapter describes manual shift gearbox design synchromesh mechanisms hydrokinetic automatic gearboxes drive line main assemblies and drive line losses The next chapter is about vehicle suspensions and optimum handling performance with emphasis on two categories of handling of vehicles steady state turning or cornering and the transient state The behavior of the steering system ride parameters and the design and installation of spring elements are discussed The third and final chapter focuses on the application of structural design analysis to the automotive structure After explaining the fundamentals of structural theory in

car body design this book presents the analysis of commercial vehicle body and chassis Throughout the book maximum use is made of line drawings and concise textural presentation to provide the working designer with an easy assimilable account of automotive design analysis This book will be useful to young automotive engineers and newcomers in automotive design

Lightweight Electric/Hybrid Vehicle Design John Fenton,Ron Hodkinson,2001-07-04 Lightweight Electric Hybrid Vehicle Design covers the particular automotive design approach required for hybrid electrical drive vehicles There is currently huge investment world wide in electric vehicle propulsion driven by concern for pollution control and depleting oil resources The radically different design demands of these new vehicles requires a completely new approach that is covered comprehensively in this book The book explores the rather dramatic departures in structural configuration necessary for purpose designed electric vehicle including weight removal in the mechanical systems It also provides a comprehensive review of the design process in the electric hybrid drive and energy storage systems Ideal for automotive engineering students and professionals Lightweight Electric Hybrid Vehicle Design provides a complete introduction to this important new sector of the industry Comprehensive coverage of all design aspects of electric hybrid cars in a single volume Packed with case studies and applications In depth treatment written in a text book style rather than a theoretical specialist text style

The Dynamics of Vehicles on Roads and on Tracks Milan Apetaur,2021-07-28 This book deals with identification methods for vehicle system dynamics and dynamic interaction of vehicles with tracks and roads It also deals with injury sequence and injury severity as the consequence of the dynamic response of the vehicle during and after collision

Analysis of the Structural Characteristics of the Daily Vehicle in Relation with the Passive Safety Pau Font de Rubinat Torrents,2010 The scope of this thesis is to make a structural analysis of the Daily vehicle and learn how to correlate the results with the homologation values in order to know if the vehicle would be ready to pass a homologative test In order to understand this first of all a brief description of the whole vehicle and their important points has been done as well as a complete summary of the commercial vehicle most important regulations The complete structural analysis has been done with numerical models provide by Iveco company that allow us to focus the study in the parts that have a biggest interest for our results in that way several configurations of each test have been designed in order to choose the better one To perform the analysis the software package of Hyperworks has been used which allow us to make a complete finite element analysis thanks to the pre processor software Hypermesh or hypercrash to set the mesh and the initial conditions the solver Radioss of which a complete and detailed explanation of how it works has been done and finally the post processor to see the results with hyper view With this entire package it have been possible to perform the analysis as we wanted as well as report all the necessary data like accelerations forces energy As for the results it will be possible to see a complete analysis and explanations of the performed test in order to achieve the normative Also from each test in order to understand the principal behavior of the most important parts a detailed analysis with a numerical model has been done in that way it helps to explain

in a better way the results and allow us to make a complete correlation if we have it with the real model For some cases it will be possible to see some modifications in the analysis or components in order to focus the analysis in a more detailed part At the end it will be possible to now the most important normative in relation with the passive safety and the commercial vehicles as well as to understand the used software and how a numerical analysis is performed to obtain the desiderate results even more and one of the most important points learn how each component work inside of the vehicle and for which reason have been thought in this way
