Analytic D Modules And Applications:

Analytic D-Modules and Applications Jan-Erik Björk, 2013-06-29 This is the first monograph to be published on analytic D modules and it offers a complete and systematic treatment of the foundations together with a thorough discussion of such modern topics as the Riemann Hilbert correspondence Bernstein Sata polynomials and a large variety of results concerning microdifferential analysis Analytic D module theory studies holomorphic differential systems on complex manifolds It brings new insight and methods into many areas such as infinite dimensional representations of Lie groups asymptotic expansions of hypergeometric functions intersection cohomology on Kahler manifolds and the calculus of residues in several complex variables The book contains seven chapters and has an extensive appendix which is devoted to the most important tools which are used in D module theory This includes an account of sheaf theory in the context of derived categories a detailed study of filtered non commutative rings and homological algebra and the basic material in symplectic geometry and stratifications on complex analytic sets For graduate students and researchers *D-Modules, Perverse Sheaves, and Representation Theory* Ryoshi Hotta, Toshiyuki Tanisaki, 2007-11-07 D modules continues to be an active area of stimulating research in such mathematical areas as algebraic analysis differential equations and representation theory Key to D modules Perverse Sheaves and Representation Theory is the authors essential algebraic analytic approach to the theory which connects D modules to representation theory and other areas of mathematics To further aid the reader and to make the work as self contained as possible appendices are provided as background for the theory of derived categories and algebraic varieties The book is intended to serve graduate students in a classroom setting and as self study for researchers in algebraic geometry representation theory *From Fourier Analysis and Number Theory to Radon Transforms and Geometry* Hershel M. Farkas, Robert C. Gunning, Marvin I. Knopp, B. A. Taylor, 2012-09-18 A memorial conference for Leon Ehrenpreis was held at Temple University November 15 16 2010 In the spirit of Ehrenpreis s contribution to mathematics the papers in this volume written by prominent mathematicians represent the wide breadth of subjects that Ehrenpreis traversed in his career including partial differential equations combinatorics number theory complex analysis and a bit of applied mathematics With the exception of one survey article the papers in this volume are all new results in the various fields in which Ehrenpreis worked There are papers in pure analysis papers in number theory papers in what may be called applied mathematics such as population biology and parallel refractors and papers in partial differential equations The mature mathematician will find new mathematics and the advanced graduate student will find many new ideas to explore A biographical sketch of Leon Ehrenpreis by his daughter a professional journalist enhances the memorial tribute and gives the reader a glimpse into the life and career of a great mathematician □□□□□□□□, 1993 **Harish-Chandra Systems on a Reductive Lie Algebra and the Zuckerman Functor** Markus Hunziker, 1997 **Algebraic Study of Systems of Partial Differential Equations** Masaki Kashiwara, 1995 **Geometric Aspects of Dwork Theory** Alan Adolphson, 2004

Moderate and Formal Cohomology Associated with Constructible Sheaves [1111], Pierre Schapira, 1996 On a complex
 manifold X the authors construct the functors $\mathrm{cdot} \otimes_{\mathrm{mathrm} w} \mathrm{mathcal} O_X$ and $\mathrm{Thom} \mathrm{cdot} \mathrm{mathcal} O_X$ of formal and
 moderate cohomology from the category of $\mathrm{mathbb} R$ constructible sheaves to that of $\mathrm{mathcal} D_X$ modules This construction
 allows for functorial and unified treatment of C^∞ functions distributions formal completion and local algebraic
 cohomology The behavior of these functors under the usual operations on $\mathrm{mathcal} D$ modules is systematically studied and
 adjunction formulas for correspondences of complex manifolds are obtained This theory provides a natural tool to treat
 integral transformations with growth conditions such as Radon Poisson and Laplace transforms **Russian Journal of**
