Environmental Analytical Chemistry D. Pérez Bendito, S. Rubio, 1999 Notwithstanding the vast amount of environmental analytical chemical literature available publications dealing with environmental analytical chemistry in a general integrated manner are rather scant In fact most literature on such a relevant topic appears to touch on individual aspects such as water or air pollution applicable conventional or special equipment used with given matrices and specific pollutant groups Most of these books are of interest to experts and only a few if any provide less experienced readers with a systematic comprehensive description of environmental analytical issues This book which is intended to fill the gap approaches the subject by focusing on the sample and its handling The fourteen chapters that make up the book follow a logical sequence of sample matrices and analyte types The first six are of paramount importance as they lay the foundations for a basic yet comprehensive coverage of the subject in the others Following the required introduction to environmental chemistry Chapters 2 to 6 deal sequentially with environmental quality assurance quality control fundamentals and practical aspects of environmental sampling the preconcentration of environmental samples and environmental control standards Chapters 7 to 12 are concerned with the analytical control of inorganic and organic pollutants in air water and soil Finally the last two chapters are devoted to speciation and chemometrics in environmental analysis Each chapter presents the state of the art of the environmental topic covered and illustrates it with a wealth of practical examples Overall the book contains about one hundred tables almost two hundred figures and more than 1700 references all of which make it a pedagogical current reference work On the borderline between a textbook and a monograph it is intended to be useful both as an academic text for the burgeoning number of undergraduate and postgraduate courses on the subject as a reference book for those starting work in the environmental field and as a source of first hand information on environmental science and its practical laboratory aspects
