is an experimental physics textbook on classical mechanics focusing on the development of experimental skills by means of  
discussion of different aspects of the experimental setup and the assessment of common issues such as accuracy and  
graphical representation The most important topics of an experimental physics course on mechanics are covered and the  
main concepts are explored in detail Each chapter didactically connects the experiment and the theoretical models available  
to explain it Real data from the proposed experiments are presented and a clear discussion over the theoretical models is  
given Special attention is also dedicated to the experimental uncertainty of measurements and graphical representation of  
the results In many of the experiments the application of video analysis is proposed and compared with traditional methods
