Diabetic Foot R. Macfarlane, W. Jeffcoate, 1998-09-04 Foot ulcers in diabetes are common but the factors which lead to their development are poorly understood and there are no clear guidelines for management The majority are cared for by doctors nurses and chiropodists working in primary care and without a specialist interest in the field and it is for these people that this book is intended The authors have based the work on more than ten years experience in running a specialist multidisciplinary service for the management of these problems and included are numerous illustrations obtained in clinical practice This is essentially a colour atlas of lesions of the diabetic foot using pictures to demonstrate the wide variation in

ulcers which may be encountered and to outline a logical approach to management The processes which lead to the development of ulcers are described as well as the many factors which prevent their healing Detailed attention is paid to factors which concern those working in primary care choice of dressings antibiotics and guidelines for follow up and specialist referral Detailed attention is also paid to educational aspects and to strategies for both primary and secondary prevention The Diabetic Foot combines the principles of a colour atlas with those of a practical manual offering doctors nurses and chiropodists clear guidance on the assessment and management of lesions of the diabetic foot **The Century Dictionary and Cyclopaedia, with a New Atlas of the World: The Century dictionary ... prepared under the superintendence of William Dwight Whitney ... rev. & enl. under the superintendence of Benjamin E.
