Gersen, Martha B. Keagle, 2008-08-17 In the summer of 1989 one of us SLG along with his mentor Dorothy Warb ton attended the Tenth International Workshop on

Human Gene Mapping The meeting was held at Yale University in celebration of the first such event which also took place there This meeting was not open to the general public one had to have contributed to mapping a gene to be permitted to attend The posters of course were therefore all related to gene mapping and many were covered with pretty colorful pictures of a novel fluorescent application of an old technology in situ hybridization Walking through the room Dorothy remarked that because of this new FISH technique chromosomes which had become yesterday's news were once again back in style Approximately three years later a commercial genetics company launched a FISH assay for prenatal ploidy detection A substantial number of cytogeneticists across the country reacted with a combination of outrage and panic Many were concerned that physicians would be quick to adopt this newfangled upstart test and put us all on the unemployment line They did not at the time realize what Dorothy instinctively already knew that FISH would not spell the doom of the cytogenetics laboratory but it would rather take it to new heights

Kalousek,Naomi Fitch,Barbara A. Paradice,2013-03-09 This book is designed primarily for anatomic pathologists to facilitate their task of accurately diagnosing embryos and fetuses A detailed examination of the products of spontaneous and induced abortions is necessary for accurate genetic counseling and for establishing the risk for specific abnormalities or another spontaneous pregnancy loss in the future The growing interest in the defects of early development reflects the profound change in general life style In the past spontaneous abortions were considered a common usually sporadic event in a patient s reproductive history Only reassurance and encour agement were given to the patient and scant attention was paid to the detailed pathology of the abortus Nowadays however as a result of reliable methods of contraception and of the availability of reliable prenatal diagnosis for chromosome abnormalities more frequent in advanced maternal age significant numbers of parents plan to have pregnan cies later in their reproductive life Consequently in a case of spontaneous abortion the question of cause and of future risk of recurrence of abortion or an abnormal infant is particularly important In the era of more elaborate and accurate prenatal diagnostic tests the pathologist examining products of conception has a primary responsibility to detect in both spontaneous and induced abortions any developmental abnormality that would indicate an increased risk of multifactorial chromosomal and single gene disorders in a subsequent child **The Developing Child** Helen L.
