*Perspectival Realism* Michela Massimi,2022 What does it mean to be a realist about science if one takes seriously the view that scientific knowledge is always perspectival namely historically and culturally situated In this book Michela Massimi articulates an original answer to this question The book begins with an exploration of how scientific communities often resort to several models and a plurality of practices in some areas of inquiry drawing on examples from nuclear physics climate science and developmental psychology Taking this plurality in science as a starting point Massimi explains the perspectival nature of scientific representation the role of scientific models as inferential blueprints and the variety of scientific realism that naturally accompanies such a view Perspectival realism is realism about phenomena rather than about theories or unobservable entities The book defends this novel realist view which places epistemic communities and their situated knowledge center stage The result is a portrait of scientific knowledge as a collaborative inquiry where the reliability of science is made possible by a plurality of historically and culturally situated scientific perspectives Along the way Massimi offers insights into the nature of scientific modelling scientific knowledge qua modal knowledge data to phenomena inferences and natural kinds as sortal concepts Perspectival realism is ultimately realism that takes the multicultural nature of science seriously and couples it with cosmopolitan duties about how one ought to think about scientific knowledge and the distribution of the benefits resulting from scientific advancements

**Deforesting the Earth** Michael Williams,2010-05-15 Anyone who doubts the power of history to inform the present should read this closely argued and sweeping survey This is rich timely and sobering historical fare written in a measured non sensationalist style by a master of his craft One only hopes almost certainly vainly that today s policymakers take its lessons to heart Brian Fagan Los Angeles Times Published in 2002 Deforesting the Earth was a landmark study of the history

and geography of deforestation Now available as an abridgment this edition retains the breadth of the original while rendering its arguments accessible to a general readership Deforestation the thinning changing and wholesale clearing of forests for fuel shelter and agriculture is among the most important ways humans have transformed the environment Surveying ten thousand years to trace human induced deforestation s effect on economies societies and landscapes around the world Deforesting the Earth is the preeminent history of this process and its consequences Beginning with the return of the forests after the ice age to Europe North America and the tropics Michael Williams traces the impact of human set fires for gathering and hunting land clearing for agriculture and other activities from the Paleolithic age through the classical world and the medieval period He then focuses on forest clearing both within Europe and by European imperialists and industrialists abroad from the 1500s to the early 1900s in such places as the New World India and Latin America and considers indigenous clearing in India China and Japan Finally he covers the current alarming escalation of deforestation with our ever increasing human population placing a potentially unsupportable burden on the world s forests
