Attribute Grammar Inversion and Source-To-Source Translation Daniel M. Yellin, 2014-01-15 **Attribute Grammar Inversion and Source-to-source Translation** Daniel M. Yellin, 1988 With the proliferation of computer languages and dialects it is important to create tools to aid in the construction of source to source translators By allowing users to make use of software or data written for another system these tools form an important component in the quest for software reusability After discussing the theoretical and practical issues of attribute grammar inversion this book demonstrates how the technique can be used to build source to source translators This is done by first identifying a common canonical form in which to represent the various source languages and then writing attribute grammars from each source to the canonical form By automatically inverting these attribute grammars one obtains translators from the canonical form back to each source language and by composing the appropriate pairs of translators one obtains source to source translators To prove the feasibility of the inversion approach to source to source translation it has been used to generate translators between the programming languages Pascal and C *Computer Aided Systems Theory -- EUROCAST 2011* Roberto Moreno-Díaz, Franz Pichler, Alexis Quesada-Arencibia, 2012-01-26 The two volume proceedings LNCS 6927 and LNCS 6928 constitute the papers presented at the 13th International Conference on Computer Aided Systems Theory EUROCAST 2011 held in February 2011 in Las Palmas de Gran Canaria Spain The total of 160 papers presented were carefully reviewed and selected for inclusion in the books The contributions are organized in topical sections on concepts and formal tools software applications computation and simulation in modelling biological systems intelligent information processing heuristic problem solving computer aided systems optimization model based system design simulation and verification computer vision and image processing modelling and control of mechatronic systems biomimetic software systems computer based methods for clinical and academic medicine modeling and design of complex digital systems mobile and autonomous transportation systems traffic behaviour modelling and optimization mobile computing platforms and technologies and engineering systems applications Modified Branching Programs and Their Computational Power Christoph Meinel, 1989-07-12 Branching Programs are besides Boolean circuits the most important nonuniform model of computation This volume gives a survey of the latest research in this field It presents a branching program based approach to complexity theory Starting with a definition of branching programs and a review of the former research nondeterministic branching programs are introduced and investigated thus allowing the description of some fundamental complexity classes The book then concentrates on the new concept of Omega branching programs Apart from the usual binary tests they contain features for evaluating certain elementary Boolean functions and are suited for characterizing space bounded complexity classes By means of these characterizations the author demonstrates the separation of some restricted complexity classes In the appendix a number of extremely restricted graph accessibility problems are given which are due to the branching program descriptions in chapters

1 3 p projection complete in the classes under consideration *Mathematics of Program Construction* Jan L.A. van de Snepscheut,1989-06-07 The papers included in this volume were presented at the Conference on Mathematics of Program Construction held from June 26 to 30 1989 The conference was organized by the Department of Computing Science Groningen University The Netherlands at the occasion of the University s 375th anniversary The creative inspiration of the modern computer has led to the development of new mathematics the mathematics of program construction Initially concerned with the posterior verification of computer programs the mathematics have now matured to the point where they are actively being used for the discovery of elegant solutions to new programming problems Initially concerned specifically with imperative programming the application of mathematical methodologies is now established as an essential part of all programming paradigms functional logic and object oriented programming modularity and type structure etc Initially concerned with software only the mathematics are also finding fruit in hardware design so that the traditional boundaries between the two disciplines have become blurred The varieties of mathematics of program construction are wide ranging They include calculi for the specification of sequential and concurrent programs program transformation and analysis methodologies and formal inference systems for the construction and analysis of programs The mathematics of specification implementation and analysis have become indispensable tools for practical programming High Performance Transaction Systems Dieter Gawlick,Mark Haynie,1989-04-26 This Lecture Notes volume is based on the International Workshop on High Performance Transaction Systems held in the Asilomar Conference Center September 28 30 1987 Many of the problems identified during the workshop are liable to determine the future development of transaction systems and distributed high performance systems in general for many years to come So the organizers of HPTS 87 felt encouraged to collect the papers presented at the workshop in order to make them accessible to a wider audience of interested developers and researchers Since some of the contributions represented work in progress the authors agreed to prepare revised and updated versions of their papers for this publication This accounts for the long delay between the event itself and the publication but on the other hand it provides the reader with a state of the art account of transaction processing topics The book is organized according to the major sections of the workshop In the network section the reader finds an analysis of two of the major paradigms in networking ISO OSI and SNA from the perspective of transaction processing In the next section four different transaction processing and database systems are described Model 204 a database management system marketed by Computer Corporation of America Tandem s NonStop SQL Citicorp s transaction processing system and ALCS which basically is a version of TPF running under MVS XA The section on architectural issues contains four very different contributions which are fairly representative of the type of problems in transaction systems investigated in the research community Finally performance evaluations and system comparisons are presented Algorithms for Parallel Polygon Rendering Theoharis Theoharis,1989-07-12 This richly illustrated volume draws from a variety of sources to present a reference work for this

remarkable volcanic province Detailed descriptions of 44 major potentially active Holocene volcanoes form the core of the book A compendium of geographical and morphological data on location type synonyms summit elevation edifice height and status for each center is followed by a summary of the structural and volcanological evolution of the edifice historic and present activity petrological and geochemical data and an assessment of volcanic hazard Each entry is superbly illustrated with a false color Landsat Thematic Mapper image maps and ground photographs Chapters on Holocene minor centers and long lived silicic caldera complexes are also well illustrated and summarise the available information on these important structures General characteristics of these Holocene centers are then synthesised with data from older episodes of volcanism in a final chapter discussing regional volcanic evolution In addition the volume also contains a database summarising morphological relative age and volcanological data for all identifiable volcanic edifices in this volcanic province

EUROCAL '87 James H. Davenport, James Harold Davenport, 1989-08-09 This is the sixth in a series of conference proceedings of international conferences on computer algebra held in Europe All the preceding ones have also been published as Lecture Notes in Computer Science They contain original research material not published elsewhere and a few invited lectures summarising the state of the art Computer algebra is the science of using computers to do algebraic calculations rather than the purely arithmetic calculations which we all know computers can do These calculations may be polynomial like calculations one thread of the conference was devoted to polynomial algorithms or may relate to other areas of mathematics such as integration the solution of differential equations or geometry a second thread was devoted to those topics The calculations can be applied in a wide range of scientific and engineering subjects and in branches of mathematics Physics has benefitted especially from these calculations and the proceedings contain many papers on this and also papers on applications in computer aided design and robotics to name but a few other applications The third thread of the proceedings was devoted to these applications and to the computer algebra systems which perform these calculations *Logic at Botik '89* Albert R. Meyer, Michael A. Taitlin, 1989-06-07 The present volume contains the proceedings of Logic at Botik 89 a symposium on logical foundations of computer science organized by the Program Systems Institute of the USSR Academy of Sciences and held at Pereslavl Zalesky USSR July 3 8 1989 The scope of the symposium was very broad the topics of interest were complexity of formal systems constructive mathematics in computer science denotational and operational semantics of programs descriptive complexity dynamic and algorithmic logics and schematology formal tools to describe concurrent computations lambda calculus and related topics foundations of logic programming logical foundations of database theory logics for knowledge representation modal and temporal logics type theory in programming and verification of programs Thus the papers in this volume represent many interesting trends in logical foundations of Computer Science ranging from purely theoretical research to practical applications of theory **Programming Languages and Systems** Andrew Gordon, 2010-03-10 Annotation This book constitutes the refereed proceedings of the 19th European Symposium on

Programming ESOP 2010 held in Paphos Cyprus in March 2010 as part of ETAPS 2010 the European Joint Conferences on Theory and Practice of Software The 30 revised full papers presented together with two invited talks one abstract and one full were carefully reviewed and selected from 121 full paper submissions The topics addressed include programming paradigms and styles methods and tools to write and specify programs and languages methods and tools for reasoning about programs methods and tools for implementation and concurrency and distribution

Dissertation Abstracts International, 1988 **Design and Implementation of Large Spatial Databases**, 1990 The most recent developments in spatial data management are reported in these proceedings SSD 89 brought together computer scientists and experts from application areas such as geography computer vision robotics computer aided manufacturing and environmental information systems This proceedings volume includes subjects such as extensible database systems spatial data structures an index structures spatial reasoning geographic information systems quadtrees and thematic map modeling Publisher's website

Notes on Set Theory Josep Díaz, 1989 The axiomatic theory of sets is a vibrant part of pure mathematics with its own basic notions fundamental results and deep open problems It is also viewed as a foundation of mathematics so that to make a notion precise simply means to define it in set theory This book gives a solid introduction to pure set theory through transfinite recursion and the construction of the cumulative hierarchy of sets and also attempts to explain how mathematical objects can be faithfully modeled within the universe of sets In this new edition the author has added solutions to the exercises and rearranged and reworked the text to improve the presentation *TAPSOFT '89: Advanced Seminar on Foundations of Innovative Software Development II and Colloquium on Current Issues in Programming Languages (CCIPL)*

Josep Díaz, Fernando Orejas, 1989 **Algorithms and Data Structures**, 1989 **Kybernetika**, 1989 **Distributed Algorithms** Jean-Claude Bermond, Michel Raynal, 1989 This book includes the papers presented at the Third International Workshop on Distributed Algorithms organized at La Colle sur Loup near Nice France September 26 28 1989 which followed the first two successful international workshops in Ottawa 1985 and Amsterdam 1987 This workshop provided a forum for researchers and others interested in distributed algorithms on communication networks graphs and decentralized systems The aim was to present recent research results explore directions for future research and identify common fundamental techniques that serve as building blocks in many distributed algorithms Papers describe original results in all areas of distributed algorithms and their applications including distributed combinatorial algorithms distributed graph algorithms distributed algorithms for control and communication distributed database techniques distributed algorithms for decentralized systems fail safe and fault tolerant distributed algorithms distributed optimization algorithms routing algorithms design of network protocols algorithms for transaction management composition of distributed algorithms and analysis of distributed algorithms Publisher's website *Advances in Cryptology--EUROCRYPT '88* Christoph G.

Günther, 1988 The International Association for Cryptologic Research 14CR organizes two international conferences every

year one in Europe and one in the United States EUROCRYPT 88 held in the beautiful environment of the Swiss mountains in Davos was the sixth European conference The number of contributions and of participants at the meeting has increased substantially which is an indication of the high interest in cryptography and system security in general The interest has not only increased but has also further moved towards authentication signatures and other protocols This is easy to understand in view of the urgent needs for such protocols in particular in connection with open information systems and in view of the exciting problems in this area The equally fascinating classical field of secrecy 2 e the theory design and analysis of stream or block ciphers and of public key cryptosystems was however also well represented and several significant results were communicated The present proceedings contain all contributions which were accepted for presentation The chapters correspond to the sessions at the conference
