Brian C. J. Moore

Auditory Frequency Selectivity:

Auditory Frequency Selectivity Brian Moore, 2012-12-06 One of the most fundamental aspects of the auditory system is its frequency selectivity the ability to resolve a complex sound into frequency components This ability plays a role in many aspects of auditory perception including the masking of one sound by another the perception of pitch for pure tones and complex tones the perception of timbre the perception of the relative phase of components in complex sounds and the perception of loudness Over the last decade there have been considerable advances in our understanding of frequency selectivity both at the physiological and psychophysical level and rapid progress continues to be made This book summarizes the proceedings of a NATO Advanced Research Workshop on Auditory Frequency Selectivity which was held in Wolfson College Cambridge from June 23rd to 27th 1986 The Workshop brought together leading researchers from all disciplines relevant to the topic with the aim of reviewing and consolidating the latest research findings and identifying areas of uncertainty or controversy where further research is needed The book is aimed primarily at research scientists and research students in the fields of psychology audiology auditory physiology biophysics medicine acoustical engineering noise control communication and speech science It should also be useful for advanced undergraduates in these disciplines A feature of the book is that it includes summaries of the discussions which followed the presentation of each paper at the Workshop

Frequency selectivity in normal-hearing and hearing-impaired persons Susan Denise Donald, 1994 **Encyclopedia of Perception** E. Bruce Goldstein, 2010 Because of the ease with which we perceive many people see perception as something that just happens However even seemingly simple perceptual experiences involve complex underlying mechanisms which are often hidden from our conscious experience These mechanisms are being investigated by researchers and theorists in fields such as psychology cognitive science neuroscience computer science and philosophy A few examples of the questions posed by these investigations are What do infants perceive How does perception develop What do perceptual disorders reveal about normal functioning How can information from one sense such as hearing be affected by information from another sense such as vision How is the information from all of our senses combined to result in our perception of a coherent environment What are some practical outcomes of basic research in perception These are just a few of the questions this encyclopedia will

consider as it presents a comprehensive overview of the field of perception for students researchers and professionals in psychology the cognitive sciences neuroscience and related medical disciplines such as neurology and ophthalmology *The Relationship Between Auditory Efferent Function and Frequency Selectivity in Man* Jennifer Clare Hill,1999 Frequency Selectivity in Normally Hearing Subjects as a Potential Measure of Noise Damage Susceptibility ,2001 **Speech Recognition and Frequency Selectivity for Hearing Impaired Listeners** Jeffrey Forrest Havens,1990 **Encyclopedia of Infant and Early Childhood Development** ,2020-03-13 Encyclopedia of Infant and Early Childhood Development Second Edition provides a comprehensive entry point into the existing literature on child development in the fields of psychology genetics neuroscience and sociology Featuring 171 chapters across 3 volumes this work helps readers understand these developmental changes when they occur why they occur how they occur and the factors that influence development Although some medical information is included the emphasis lies mainly in normal growth primarily from a psychological perspective Comprehensive and in depth scholarly articles cover theoretical applied and basic science topics providing an interdisciplinary approach All articles have been completely updated making this resource ideal for a wide range of readers including advanced undergraduate and graduate students researchers and clinicians in developmental psychology medicine nursing social science and early childhood education Cutting edge content that cover the period of neonates to age three Organized alphabetically by topic for ease of reference Provides in depth scholarly articles covering theoretical applied and basic science Includes suggested readings at the end of each article Aging and the Auditory System James F. Russell,1992 This book comprises a selection of review papers and original research from leading scientists with interests as diverse as the psychology of music perception and inner ear biology Rather than attempting a complete coverage of the vast field of hearing research the book probes the subject with a series of in depth papers that deal with the most exciting developments in each discipline The result is a multidisciplinary sketch of the field that should act as both a useful reference and a stimulating basis for discussion among research workers and advanced students in the fields of hearing biophysics and physiology *The Journal of the Acoustical Society of America* Acoustical Society of America,2006

Psychophysical, Physiological and Behavioural Studies in Hearing G. van den Brink,F.A. Bilsen,1980

Experimentists in various disciplines such as anatomy physics chemistry physiology psychophysics and psychology have been carrying out their studies in order to increase our knowledge and understanding of sensory perception To profit maximally from the results obtained from these different viewpoints each should take the work of the others into account The need for intensive communication is therefore ever present In 1969 in the field of auditory research this need resulted in P10mp s initiative to organizing an international symposium Frequency analysis and periodicity perception in hearing Considering the lively discussions and the numerous references in literature to the proceedings of this Driebergen symposium the meeting

clearly fulfilled its need It was clear at the time that this sort of symposium should be held regularly This resulted in meetings in 1972 Eindhoven 1974 Tutzing and 1977 Keele At the meeting in Keele it was agreed that the next one should be held in 1980 again in the Nether lands With regard to the program we decided to carry on the now expanded tradition of including anatomy physiology psychophysics and the development of models in the program but to pay more attention to the behavioural aspects of hearing at the same time As a result some contributions on animal behaviour have been included in the program One of the great advantages of this sort of symposium is that one has the opportunity of paying immediate attention to topics that are of current interest at the time
