Characterization Of Porous Solids II:

Characterization of Porous Solids II KK Unger, F. Rodríguez-Reinoso, Jean Rouquerol, Kenneth Sing, 1991-04-19 The Second IUPAC Symposium on the Characterization of Porous Solids COPS II provided the opportunity for detailed discussion and appraisal of the most important techniques currently used for the characterization of porous materials especially those of technological importance The 82 selected papers and reviews contained in this volume are mainly concerned with the theoretical and experimental aspects of adsorption fluid penetration small angle scattering and spectroscopic methods with their application in the study of adsorbents catalysts constructional materials etc Particular attention is given to the characterization of carbons oxides zeolites clays cement and polymers The wide range of materials and techniques described in this book provide a useful and comprehensive reference source for academic and industrial scientists and technologists

Characterisation of Porous Solids V G. Kreysa, J.P. Baselt, KK Unger, 2000-04-11 The Fifth International Symposium on the Characterisation of Porous Solids COPS V was held at Heidelberg Germany from May 30 to June 2 1999 About 220 participants from 25 countries enjoyed a very successful meeting with 32 lectures and 155 poster presentations The Symposium started with a highly stimulating lecture by Sir John Meurig Thomas Cambridge highlighting the recent developments in engineering of new catalysts The following two full sessions were devoted to theory modelling and simulation which provide the basis for the interpretation of pore structural data of adsorbents and finely dispersed solids Sessions 2 and 3 focused on the advances in the synthesis and characterisation of highly ordered inorganic adsorbents and carbons Sessions 4 and 5 addressed important questions with respect to the characterisation of porous solids by sorption measurement and other related techniques The intensive three day programme provided a stimulating forum for the exchange of novel research findings concepts techniques and materials which are collected in this volume

Fundamentals of Inorganic Membrane Science and Technology A.J. Burggraaf, L. Cot, 1996-11-19 Inorganic membrane science and technology is a new field of membrane separation technology which until recently was dominated by the earlier field of polymer membranes Currently the subject is undergoing rapid development and innovation The present book describes the fundamental principles of both synthesis of inorganic membranes and membrane supports and also the associated phenomena of transport and separation in a semi quantitative form Features of

this book Examples are given which illustrate the state of the art in the synthesis of membranes with controlled properties Future possibilities and limitations are discussed The reader is provided with references to more extended treatments in the literature Potential areas for future innovation are indicated By combining aspects of both the science and technology of inorganic membranes this book serves as a useful source of information for scientists and engineers working in this field It also provides some observations of important investigators who have contributed to the development of this subject

Characterisation of Porous Solids VIII Stefan Kaskel,2009 This book is the Proceedings of the 8th International Symposium on the Characterisation of Porous Solids The conference is one of a series held every three years which covers developments in methods for the characterisation of porous materials and applications of those methods COPS VIII is concerned with fundamental and applied research on the characterisation of the structure of porous materials and the relationship between structure and material performance The scope includes experimental characterisation methods such as X Ray diffraction NMR adsorption mercury intrusion and calorimetry theoretical and simulation methods used to interpret experimental data such as molecular simulation classical and statistical mechanical theory and pore network modelling and applied research on the impact of measured material properties on performance in applications This book will appeal to both academics and commercial researchers IUPAC Symposium on Characterization of Porous Solids (COPS-II) ,1990
