Charleston Kedding Ramboro Books,1998-11 *Charleston Kedding* Susan Campbell,1996 **Technology and the Big House in Ireland, C. 1800-c. 1930** Charles John Thomas Carson,2009

By the beginning of the nineteenth century over ninety five percent of all the productive land in Ireland was in the hands of Anglo Irish landowners They lived in the big houses some of which still exist today resplendent within their walled estates Many others are now only gaunt ruins silhouetted against somber Irish skies victims of the troubles in the 1920s There is a continuing fascination with the history of the big house in Ireland Much of this interest stems from the Anglo Irish living in places apart in their estates often in remote areas of an undeveloped and hostile land Part of the appeal is in the characters neither wholly English nor Irish who made up this landowning class in Ireland However another part largely ignored until this study is how many of these landowners not only met these challenges but achieved remarkable levels of self sufficiency It was their exploitation of technology that hugely bolstered their status and independence and enabled them to lead an exotic lifestyle in Ireland Although much has been written regarding the social and political history of the Anglo Irish in Ireland little research has been conducted into the practical problems of living there At a time when there were few roads no railways and sailing ships were the unreliable connection with England existence might have been very basic indeed Charles Carson uncovers and explains in simple terms the technologies employed to not only make life bearable but in some case to become a triumph over seemingly impossible odds An appreciation of this background helps to explain the sense of status and independence that emanates from the big house in Ireland until their demise in the late twentieth century Interdisciplinary investigative methods were used in this work These included extensive archival research of estate papers throughout Ireland fieldwork involving examination and photography of still extant big house technology and the use of published fictional and biographical big house material Much additional insight and suggestions for further research resulted from visits to various big house locations Owners often descendants of the original families or managers and ground staff provided important local knowledge Climbing amongst stored artefacts in cellars barns and subterranean tunnels helped to bring the past alive Something of the ambiance of these explorations informs this book thus helping towards an understanding of the fundamental importance of technology in underpinning the status and independence of the big house in Ireland By examining the range costs and changing nature of the technologies employed this book makes an important contribution to a deeper understanding of life in the big house in Ireland circa 1800 to circa 1930 Brief descriptions accompanied by drawings or photographs are employed to explain the operation limitations and improvements of many of the installations and techniques These include water closets pumps cisterns boilers and firefighting equipment open fires hot air stoves and central heating walled gardens hot walls and beds warm air steam and hot water heating of glasshouses the construction location stocking and use of ice houses and ice daylight enhancement candle oil gas and electric lighting an optical telegraph a church spire

engine driven equipment on the estate farm as well as mapping of bogs and their reclamation by wooden railways
Technology and the Big House in Ireland c 1800 c 1930 is an important reference source for Irish study groups worldwide

England's Magnificent Gardens Roderick Floud, 2021-06-15 An altogether different kind of book on English gardens the first of its kind a look at the history of England's magnificent gardens as a history of Britain itself from the seventeenth century gardens of Charles II to those of Prince Charles today In this rich revelatory history Sir Roderick Floud one of Britain's preeminent economic historians writes that gardens have been created in Britain since Roman times but that their true growth began in the seventeenth century by the eighteenth century nurseries in London took up 100 acres with ten million plants that were worth more than all of the nurseries in France combined Floud's book takes us through more than three centuries of English history as he writes of the kings queens and princes whose garden obsessions changed the landscape of England itself from Stuart Georgian and Victorian England to today's Windsors Here are William and Mary who brought Dutch gardens and bulbs to Britain William who twice had his entire garden lowered in order to see the river from his apartments and his successor Queen Anne who like many others since vowed to spend little on her gardens and instead spent millions Floud also writes of Frederick Prince of Wales the founder of Kew Gardens who spent more than 40 000 on a single twenty five foot tulip tree for Carlton House Queen Victoria who built the largest most advanced and most efficient kitchen garden in Britain and Prince Charles who created and designed the gardens of Highgrove inspired by his boyhood memories of his grandmother's gardens We see Sarah Duchess of Marlborough who created a magnificent garden at Blenheim Palace only to tear it apart and build a greater one Deborah Duchess of Devonshire the savior of Chatsworth's 100 acre garden in the midst of its 35 000 acres and the gardens of lesser mortals among them Gertrude Jekyll and Vita Sackville West both notable garden designers and writers We see the designers of royal estates among them Henry Wise William Kent Humphrey Repton and the greatest of all English gardeners Capability Brown who created the 150 acre lake of Blenheim Palace earned millions annually and designed more than 170 parks many still in existence today We learn how gardening became a major catalyst for innovation central heating came from experiments to heat greenhouses with hot water pipes how the new iron industry of industrializing Britain supplied a myriad of tools mowers pumps and the boilers that heated the greenhouses and finally Floud explores how gardening became an enormous industry as well as an art form in Britain and by the nineteenth century was unrivaled anywhere in the world **The Magazine Antiques**, 1998 Lancelot 'Capability' Brown, 1716-1783

Jane Brown, 2011-03-03 Lancelot Brown changed the face of eighteenth century England designing country estates and mansions moving hills and making flowing lakes and serpentine rivers a magical world of green This English landscape style spread across Europe and the world At home it proved so pleasing that Brown's influence spread into the lowland landscape at large and into landscape painting He stands behind our vision and fantasy of rural England In this vivid lively biography based on detailed research Jane Brown paints an unforgettable picture of the man his work his happy domestic life and his
