Brasier, D. McIlroy, N. McLoughlin, 2017-06-09 This volume in memory of Professor Martin Brasier which has many of his unfinished works summarizes recent progress in some of the hottest topics in palaeobiology including cellular preservation of early microbial life and early evolution of macroscopic animal life encompassing the Ediacara biota The papers focus on how to decipher evidence for early life which requires exceptional preservation employment of state of the art techniques and also an understanding gleaned from Phanerozoic lagersttte and modern analogues The papers also apply Martin s MOFAOTYOF principle my oldest fossils are older than your oldest fossils requiring an integrated approach to understanding fossils The adoption of the null hypothesis that all putative traces of life are abiotic until proven otherwise and the consideration of putative fossils within their spatial context characterized the work of Martin Brasier as is well demonstrated by the papers in this volume *Canadian Journal of Earth Sciences*, 2011 Earth's Oldest Rocks Martin J.

Van Kranendonk, Vickie Bennett, Elis Hoffmann, 2018-09-26 **Earth's Oldest Rocks** Second Edition is the only single reference source for geological research of early Earth. This new edition is an up-to-date collection of scientific articles on all aspects of the early history of the Earth from planetary accretion at 4.567 billion years ago (Ga) to the onset of modern-style plate tectonics at 3.2 Ga. Since the first edition was published, significant new advances have been made in our understanding of events and processes on early Earth that correspond with new advances in technology. The book includes contributions from over 100 authors, all of whom are experts in their respective fields. The research in this reference concentrates on what is directly gleaned from the existing rock record to understand how our planet formed and evolved during the planetary accretion phase, formation of the first crust, the changing dynamics of the mantle and style of tectonics, life's foothold and early development, and mineral deposits. It is an ideal resource for academics, students, and the general public alike. Advances in early Earth research since 2007, based primarily on evidence gleaned directly from the rock record. More than 50% of the chapters in this edition are new, and the rest of the chapters are revised from the first edition with more than 700 pages of new material. Comprehensive reviews of areas of ancient lithosphere from all over the world and of crust-forming processes. New chapters on early solar system materials, composition of the ancient atmosphere, hydrosphere, and overviews of the oldest evidence of life on Earth and modeling of early Earth tectonics.

**Geology of Southwest Gondwana** Siegfried Siegesmund, Miguel A. S. Basei, Pedro Oyhançabal, Sebastian Oriolo, 2018-02-02 This book focuses on the geological evolution of Southwest (SW) Gondwana and presents state-of-the-art insights into its evolution. It addresses the diachronic assembly of continental fragments derived from the break-up of the Rodinia supercontinent, later amalgamated to build SW Gondwana during the Neoproterozoic-Cambrian transition, which on a global scale includes parts of present-day South America, Africa, and Madagascar. The book presents 24 state-of-the-art reviews, including the most crucial controversies. Most experienced scientists about the geology of SW Gondwana from Europe, Africa, South America, and Australia present contributions on key areas addressing the interactions between the main cratons and fold belts on both sides of the South Atlantic Ocean. Chapters related to the geology of the major Archean-Paleoproterozoic cratons and Neoproterozoic-Brazilian-Pan-African fold belts enable readers to gain an in-depth understanding of the tectono-metamorphic and magmatic evolution of SW Gondwana. The book covers a wide range of issues, including metallogenetic, sedimentary, paleobiological, and paleoclimatic processes, and allows a deep insight into this key period of the Earth's evolution.
