Atmospheric Convection:

Atmospheric Convection Kerry A. Emanuel, 1994 This graduate level meteorology text and reference provides a scientifically rigorous description of the many types of convective circulations in the Earth's atmosphere. These range from small scale convectively driven turbulences in the boundary layer to precipitating systems covering many thousands of square kilometers. The text introduces the principal techniques used in understanding and predicting convective motion: theory, field experiment and numerical modelling. Part I explores dry convection including turbulent plumes and thermals from isolated buoyancy sources. Raleigh Benard convection and turbulent convection in the planetary boundary layer. Emphasis is placed on applying theoretical understanding and lessons from experiments. Part II offers a complete treatment of the thermodynamics of moist and cloudy air including fundamental laws, conserved quantities, graphical techniques and stability. Part III explores the characteristics of individual convective clouds: thunderstorms, squall lines, mesoscale convective systems and slantwise convection. Part IV studies the ensemble effects of convective clouds including stratocumulus at trade cumulus boundary layers and the representation of convective clouds in numerical models. Each chapter is followed by a set of exercises.

The Physics and Parameterization of Moist Atmospheric Convection R.K. Smith, 1997-11-30 An up to date summary of our understanding of the dynamics and thermodynamics of moist atmospheric convection with a strong focus on recent developments in the field. The book also reviews ways in which moist convection may be parameterised in large scale numerical models, a field in which there is still some controversy and discusses the implications of convection for large scale flow. Audience: The book is aimed at the graduate level and research meteorologists as well as scientists in other disciplines who need to know more about moist convection and its representation in numerical models.

Atmospheric Convection: Research and Operational Forecasting Aspects Dario B. Gaiotti, Reinhold Steinacker, Fulvio Stel, 2007-12-14 A book on atmospheric convection treated in detail from different angles including the theoretical aspects of atmospheric deep convection and the weather phenomena related to convection. The problem of boundary conditions that result in severe convective weather patterns is explored within the framework of worldwide climatology and weather forecasting including forecast verification by means of their dynamic and thermodynamic properties. The book aims to bridge the gap between theory and its operational application both within the fields of weather forecasting and that of risk management. It addresses itself to meteorologists, physicists and weather forecasters but will also be invaluable to PhD students attending courses on environment, fluid dynamics and meteorology. Each chapter is practically self contained and there are no propaedeutic sections that the reader needs to peruse before moving on to the more advanced ones.

Ecohydrology Amilcare Porporato, Jun Yin, 2022-02-17 Ecohydrology is a fast growing branch of science at the interface of ecology and geophysics studying the interaction between soil, water, vegetation, microbiome, atmosphere, climate and human society. This textbook gathers the fundamentals of hydrology, ecology, environmental engineering, agronomy and atmospheric science to provide a

rigorous yet accessible description of the tools necessary for the mathematical modelling of water energy carbon and nutrient transport within the soil plant atmosphere continuum By focusing on the dynamics at multiple time scales from the diurnal scale in the soil plant atmospheric system to long term stochastic dynamics of water availability responsible for ecological patterns and environmental fluctuations it explains the impact of hydroclimatic variability on vegetation and soil microbial systems through biogeochemical cycles and ecosystems under different socioeconomical pressures It is aimed at advanced students researchers and professionals in hydrology ecology Earth science environmental engineering environmental science agronomy and atmospheric science
