Atomic Multielectron Processes:

Atomic Multielectron Processes Viatcheslav Shevelko, Hiro Tawara, 2013-03-09 Atomic Multielectron Processes is the first comprehensive collection of the data mostly cross sections and methods devoted to the multielectron transitions in atoms and ions induced by single collisions with charged particles and photons The book covers the fundamental ranges of atomic physics which helps understanding the nature of many particle transitions **Many-body Theory of Atomic Structure and Photoionization** Tu-nan Chang, 1993-01-01 *Atomic Processes in Electron-Ion and Ion-Ion Collisions* F. Brouillard, 2012-11-25 Four years after a first meeting in BADDECK Canada on the Physics of Ion Ion and Electron Ion collisions a second Nato Advanced Study Institute in HAN Lesse Belgium reexamined the subject which had become almost a new one in consideration of the many important developments that had occurred in the mean time The developments have been particularly impressive in two areas the dielectronic recombination of electrons with ions and the collisional processes of multiply charged ions For dielectronic recombination a major event was the obtainment in 1983 of the first experimental data This provided at last a non speculative basis for the study of that intricate and subtle process and strongly stimulated the theoretical activities Multiply charged ions on the other hand have become popular thanks to the development of powerful ion sources This circumstance together with a pressing demand from thermonuclear research for ionisation and charge exchange cross sections has triggered systematic experimental investigations and new theoretical studies which have contributed to considerably enlarge over the last five years our understanding of the collisional processes of multiply charged ions Dielectronic recombination and multiply charged ions were therefore central points in the programme of the ASI in HAN Lesse and are given a corresponding emphasis in the present book *Atomic and Molecular Processes* David R. Bates, 1964 *Atomic and Molecular Processes* David Robert Bates, 1964 **Atomic Processes in Basic and Applied Physics** Viatcheslav Shevelko, Hiro Tawara, 2014-06-11 The book is a comprehensive edition which considers the interactions of atoms ions and molecules with charged particles photons and laser fields and reflects the present understanding of atomic processes such as electron capture target and projectile ionisation photoabsorption and others occurring in most of laboratory and astrophysical plasma sources including many photon and many electron processes The material consists of selected papers written by leading scientists in various fields *Atomic Collisions and Spectra* U Fano, 2012-12-02 Atomic Collisions and Spectra provides an overview of the state of knowledge on atomic collision physics The book grew out of lecture notes for a succession of courses at the University of Chicago in 1967 1979 which reported the new material as it was taking a definite form It has been enriched since 1980 as the subject matured and continued to expand The book is organized into four parts Part A deals briefly with rather elementary items of general information Part B then takes up in considerable detail those aspects of single electron scattering whose mastery is essential for treating multielectron processes Part C deals with multielectron processes with a residual if often realistic restriction namely that the multielectron interactions remain

confined within a core region from which only a single electron escapes into alternative channels of a long range field Part D surveys studies of double or multiple escape of electrons from a core The book is intended for multiple use as a graduate school text a tool for independent study or a reference for particular topics **Multiphoton Processes in Atoms** N.B. Delone, V.P. Krainov, 2012-10-23 This book presents a detailed modern description of the ionization of atoms by strong laser radiation The authors present descriptions of processes occurring in atoms under the action of strong electromagnetic radiation in particular the shift broadening and mixing of atomic states The topics include tunneling ionization above threshold ionization ionization of multiply charged ions resonance enhanced ionization super intense radiation fields and properties of Rydberg states strongly perturbed by laser radiation Many-Electron and Multiphoton Atomic Processes Anatoli Kheifets, Gleb Gribakin, Vadim Ivanov, 2023-02-24 This Special Issue contains contributions from colleagues former students and collaborators of the late Prof Miron Amusia who was a world leading figure in theoretical atomic physics over the past half a century The focus of this Special Issue is on many electron and multiphoton atomic processes that are at the forefront of contemporary atomic and molecular physics Special attention is given to the many electron correlation problem and its interplay with strong field laser atom interactions These scientific advances represent the lasting legacy of Prof Amusia and his school
