

PLASMA

- ❖ Is the fourth state of matter.
- ❖ To put it very simply, a plasma is an ionized gas, a gas into which sufficient energy is provided to free **electrons** from atoms or molecules and to allow both species, ions and electrons, to coexist.
- ❖ The funny thing about that is, that as far as we know, plasmas are the most common state of matter in the universe. They are even common here on earth.
- ❖ A plasma is a gas that has been energized to the point that some of the electrons break free from, but travel with, their **nucleus**.
- ❖ Gases can become plasmas in several ways, but all include pumping the gas with energy. A spark in a gas will create plasma. A hot gas passing through a big spark will turn the gas stream into plasma that can be useful. Plasma torches like that are used in industry to cut metals.
- ❖ The biggest chunk of plasma you will see is that dear friend to all of us, the sun. The sun's enormous heat rips electrons off the **hydrogen** and **helium** molecules that make up the sun. Essentially, the sun, like most stars, is a great big ball of plasma.

Atoms In Plasmas
