■ **Abstract** This chapter reviews empirical and theoretical developments in research on social influence and message-based persuasion. The review emphasizes research published during the period from 1996–1998. Across these literatures, three central motives have been identified that generate attitude change and resistance. These involve concerns with the self, with others and the rewards/punishments they can provide, and with a valid understanding of reality. The motives have implications for information processing and for attitude change in public and private contexts. Motives in persuasion also have been investigated in research on attitude functions and cognitive dissonance theory. In addition, the chapter reviews the relatively unique aspects of each literature: In persuasion, it considers the cognitive and affective mechanisms underlying attitude change, especially dual-mode processing models, recipients' affective reactions, and biased processing. In social influence, the chapter considers how attitudes are embedded in social relations, including social identity theory and majority/minority group influence.

The Process of Social Influence Thomas D. Beisecker, Donn W. Parson, 1972 *Attitude and Attitude Change* Georgian Federation of Psychologists Academic Team, The concept of attitude a fundamental construct in social psychology has been a subject of extensive research and discussion for decades Attitudes defined as learned global evaluations that influence thought and action play a crucial role in shaping human behavior and decision making processes Higbee Wells 1972 Recent developments in the field have shed light on the complex nature of

attitudes challenging the traditional unidimensional view and exploring the multifaceted aspects of attitude strength One of the key reasons for the academic interest in attitudes is their ability to predict and understand human behavior As attitudes become more favorable towards an object individuals are more likely to engage with and utilize that object Rucker 2020 However the strength of an attitude independent of its valence is equally important in determining its influence on thought and behavior Stronger attitudes those that are more persistent over time resistant to change and influential on cognition and behavior have been the focus of growing research Eaton et al 2008 Empirical studies have provided insights into the structure and function of attitude strength Attitudes can vary widely in their ability to guide perception shape thoughts and inspire action congruent behaviors Some attitudes profoundly influence our understanding of the world and prompt us to act in accordance with our evaluations while others exert little impact on our thoughts and actions fluctuating over time and easily susceptible to persuasive appeals Eaton et al 2008 The multidimensional nature of attitudes has also been a topic of interest in the field of social psychology Recent research has challenged the traditional unidimensional view of attitudes suggesting that they may possess a more complex structure encompassing cognitive affective and behavioral components This multidimensional perspective has important implications for understanding the mechanisms underlying attitude change and the role of affect in persuasion

Social Psychology Prof. Dr. Bilal Semih Bozdemir, Social psychology a vibrant and evolving field occupies a unique niche within the broader domains of psychology and social sciences It promises a profound understanding of how individual thoughts feelings and behaviors are shaped by social influences This chapter will delineate the definitions of social psychology explore its core scope and illustrate its significance in understanding human interactions

Definition of Social Psychology At its core social psychology is the scientific study of how individuals perceive themselves in relation to others how they are influenced by the social context and how their behaviors are shaped by the presence of others whether those others are real imagined or implied Allport 1954 defined social psychology as the scientific attempt to understand and explain how the thoughts feelings and behaviors of individuals are influenced by the actual imagined or implied presence of other human beings This definition encapsulates three essential components of social psychology the individual the social context and the interaction between the two Furthermore social psychology is distinguished from other branches of psychology by its emphasis on the social environment While other psychological disciplines such as clinical or developmental psychology may focus on individual differences social psychology seeks to understand how social situations and group dynamics shape behaviors universally The field investigates phenomena ranging from interpersonal relationships and group behavior to organizational dynamics and cultural differences
